Quarterly report on energy supply-demand in Canada

1984-I

Bulletin trimestriel – disponibilité et écoulement d'énergie au Canada

1984-I

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Energy Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9823) or to the Statistics Canada reference centre in:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |
| Halifax (426-5331) | Winnipeg (949-4020) |
| Montréal (283-5725) | Regina (359-5405) |
| Ottawa (990-8116) | Edmonton (420-3027) |
| Toronto (966-6586) | Vancouver (666-3691) |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

| | |

| Newfoundland and Labrador | Zenith 0-7037 |
| Nova Scotia, New Brunswick and Prince Edward Island | 1-800-565-7192 |
| Quebec | 1-800-361-2831 |
| Ontario | 1-800-268-1151 |
| Manitoba | 1-800-282-8006 |
| Saskatchewan | 1(112)800-282-8006 |
| Alberta | 1-800-222-6400 |
| British Columbia (South and Central) | 112-800-663-1551 |
| Yukon and Northern B.C. (area served by NorthwTel Inc.) | Zenith 0-8913 |
| Northwest Territories (area served by NorthwTel Inc.) | Zenith 2-2015 |

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section de l'énergie,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9823) ou au centre de consultation de Statistique Canada à:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |
| Halifax (426-5331) | Winnipeg (949-4020) |
| Montréal (283-5725) | Regina (359-5405) |
| Ottawa (990-8116) | Edmonton (420-3027) |
| Toronto (966-6586) | Vancouver (666-3691) |

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres régionaux de consultation.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- † disposition of this secondary product is shown under the primary form thereof.

NOTE

Data for any quarter in a calendar year may be revised and included in the cumulative tables of a subsequent quarterly issue of that year. Given that further revisions to submitted data are received after the publication of the fourth quarter issue of any given year, it should be borne in mind that the statistical series shown in this publication are not necessarily the same in every detail as those shown in other annual publications produced by the Energy Section of Statistics Canada. These latter publications are usually published after the fourth quarter issue of this publication.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.
- † la disposition de ce produit secondaire est comprise dans les données relatives à la forme primaire de ce même produit.

NOTA

On peut réviser et inclure les données d'un trimestre d'une année civile dans les tableaux cumulatifs d'un numéro trimestriel ultérieur de cette même année. Comme d'autres révisions aux données soumises sont reçues après publication du numéro du quatrième trimestre d'une année donnée, il faut se rappeler que les séries statistiques figurant dans cette publication ne sont pas nécessairement les mêmes à tous égards que celles présentées dans l'autres publications annuelles produites par la Section de l'énergie de Statistique Canada. Ces dernières publications paraissent ordinairement après le numéro du quatrième trimestre de la présente publication.

This publication was prepared under the direction of:

- **Harold Nightingale**, Director, Manufacturing and Primary Industries Division
- **Ian Cavanagh**, Chief, Energy Section
- **Don Wilson**, Head, Analysis and coordination
- **Lise Perreault**, Automation

EXPLANATORY NOTES

The demand data contained in this publication are derived primarily from quarterly surveys of the energy supply industries. These surveys are structured towards obtaining consumption data in a standardized format, that is one which allows inter-energy comparisons. The validity of the published data is a function of the ability of the responding supply industries to code customers in an accurate manner. However, many reporting companies, especially in the petroleum products area, have difficulty in determining the final consumer of the product, due to the presence of marketing agents, brokers, etc. Further, the final consumer may use his purchased product in a number of different industries. Additionally some responding companies are not able to distinguish between certain of the disposition categories - for example between "public administration" and "other commercial/institutional". Finally, "producer consumption" for electric power includes not only "utility use", "transmission losses", etc., but also the category "unaccounted for" which is subject to variation because of cyclical billing.

The universes for all surveys forming the basis of this publication are characterized by very few but very large respondents - Hydro-Quebec, Imperial Oil Ltd., etc. Consequently, in general no "sample" surveys are employed; rather surveys of the total universe form the basis of this present publication. Those few areas where estimates have played a role are indicated in the section on Data Sources following.

Note should be made of the fact that data are published in metric units only.

- kilo = 10^3
- mega = 10^6
- giga = 10^9
- tera = 10^{12}
- peta = 10^{15}
- 1 megalitre = $10^3 m^3$ (or 1 000 cubic metres)
- 1 gigalitre = $10^6 m^3$ (or 1 000 000 cubic metres)
- 1 B.t.u. = $1.054\ 615 \times 10^3$ joules

NOTES EXPLICATIVES

Les données sur l'écoulement d'énergie contenues dans cette publication sont tirées d'enquêtes trimestrielles auprès des fournisseurs d'énergie. Ces enquêtes sont réalisées afin d'obtenir des données sur la consommation sous forme normalisée, c.-à-d., permettant la comparaison entre les formes d'énergie. La validité des données publiées est donc fonction de la capacité de ces fournisseurs à codifier leurs clients d'une manière précise. Cependant, plusieurs répondants, particulièrement dans le secteur des produits pétroliers, ont de la difficulté à identifier les consommateurs finals, étant donné que les ventes sont souvent faites par des revendeurs, agents, etc., et il arrive souvent que le consommateur final utilise le produit acheté dans plusieurs industries. En plus, certaines compagnies répondantes ne peuvent distinguer entre certaines catégories - par exemple les catégories "administration publique" et "commerces et institutions". En dernier lieu, "autoconsommation des producteurs" dans le secteur de l'énergie électrique comprend non seulement "l'utilisation des services" ainsi que "les pertes du transport" de la-dite énergie mais aussi la catégorie des quantités "non comptabilisées" laquelle est sujette à varier dû à une rectification périodique des comptes.

L'univers de toutes les enquêtes de base pour cette publication se caractérise par le nombre restreint d'enquêtés mais qui ont une influence marquée - Hydro-Québec, Imperial Oil Ltd., etc. Aussi, plutôt que de procéder par sondage, on recense généralement l'univers total et les données complètes ainsi recueillies forment l'essentiel de cette publication. Les quelques secteurs où l'on procède à des estimations sont identifiés à la section suivante sur les sources des données.

À noter que les données sont publiées en unités métriques seulement.

- kilo = 10^3
- mega = 10^6
- giga = 10^9
- tera = 10^{12}
- peta = 10^{15}
- 1 mégalitre = $10^3 m^3$ (ou 1 000 mètres cubes)
- 1 gigalitre = $10^6 m^3$ (ou 1 000 000 mètres cubes)
- 1 B.t.u. = $1.054\ 615 \times 10^3$ joules

1 barrel = .158 91 cubic metres
 1 gallon = 4.546 09 litres
 1 cubic foot = .028 327 84 cubic metres
 1 ton = .907 184 7 metric tonne.

Energy conversion factors utilized based on the gross heat of combustion, are as follows:

1 baril = .158 91 mètre cube
 1 gallon = 4.546 09 litres
 1 pied cube = .028 327 84 mètre cube
 1 tonne impériale = .907 184 7 tonne métrique.

Les facteurs de conversion en terajoules calculés selon la chaleur brute de combustion sont les suivants:

| Fuel type | Natural unit | Conversion factor |
|---|-----------------------------------|---------------------------|
| Combustible | Unité naturelle | Coefficient de conversion |
| Coal - Charbon: | | terajoules |
| Anthracite | kilotonnes | 29.53 |
| Imported bituminous - Bitumineux importé | " | 29.99 |
| Canadian bituminous - Bitumineux canadien | " | 29.30 |
| Sub-bituminous - Sousbitumineux | " | 19.76 |
| Lignite | " | 15.35 |
| Coke | " | 28.83 |
| Coke oven gas - Gaz de four à coke | gigalitres | 18.61 |
| Propane | megalitres | 25.53 |
| Butane | " | 28.62 |
| Ethane | " | 18.36 |
| LPG's - GPL | " | 27.12(1) |
| Crude oil - Pétrole brut | " | 38.51 |
| Still gas - Gas de distillation | " | 41.73(2) |
| Motor gasoline - Essence à moteur | " | 34.66 |
| Kerosene - Kérosène | " | 37.68 |
| Diesel - Huiles diesels | " | 38.68 |
| Light fuel oil - Mazouts légers | " | 38.68 |
| Heavy fuel oil - Mazouts lourds | " | 41.73 |
| Petroleum coke - Coke de pétrole | " | 42.38 |
| Aviation gasoline - Essence d'aviation | " | 33.52 |
| Aviation turbo fuel - Carburéacteurs pour turbine à gaz | " | 35.93 |
| Natural gas - Gaz naturel | gigalitres | 38.02(3) |
| Electricity - Énergie électrique | gigawatt hours gigawatt heures | 3.60 |
| Steam - Vapeur | kilotonnes | 2.75 |
| Solid wood wastes - Déchets de bois | " | 18.00 |
| Spent pulping liquor - Lessive de pâte épuisée | " | 14.00 |

(1) Not used in calculations in this publication.

(1) Pas employé dans les calculs de cette publication.

(2) Still gas is expressed in cubic metres of heavy fuel oil equivalent.

(2) Le gaz de distillation s'exprime en équivalent de mètre cube de mazout lourd.

(3) May be revised from year to year, see note on page xv.

(3) Peut être révisé d'une année à l'autre; voir la note à la page xv.

Since this quarterly publication gives additional detail on non-energy products at petroleum refineries, it was necessary to employ the following equivalents for the products listed:

Puisque cette publication trimestrielle donne des renseignements supplémentaires sur des produits non énergétiques fabriqués aux raffineries de pétrole, il a fallu utiliser les équivalents suivants pour chacun de ces produits:

| Fuel type | Natural unit | Conversion factor |
|--|-----------------|---------------------------|
| Combustible | Unité naturelle | Coefficient de conversion |
| | | terajoules |
| Petrochemical feedstock - Alimentation pétrochimique | megalitres | 35.17 |
| Naptha specialities - Produits spéciaux/base-napthe | " | 35.17 |
| Asphalt - Asphalte | " | 44.46 |
| Lubricating oils and greases - Huiles et graisses lubrifiantes | " | 39.16 |
| Other products - Autres produits | " | 39.82 |

Notes on Individual Tables

Table S - Historical Energy Summary Table - Canada

This table is intended to allow an analysis of historical energy trends at the national level for certain points of measurement - namely:

1. Production, from primary sources.
2. Gross availability, availability of each energy form (excluding crude oil); less production of coke, production of coke oven gas, production of thermal electricity, LPG's used for the production of refinery products.
3. Net domestic consumption (net supply of primary and secondary sources, excluding crude oil).
4. Producer consumption (less any crude oil consumed by producers).
5. Non-energy use.
6. Energy use.
7. Total mining.
8. Total manufacturing.
9. Total industry.
10. Total transportation (see explanation under Table S3).
11. Residential and farm.
12. Government and other commercial.

In years prior to 1983 nuclear and hydro energy has been converted at 10.5 megajoules per kilowatt hour for Categories 1 and 2 above, this is no longer being done.

Notes sur les tableaux

Tableau S - Tableau chronologique sommaire de l'énergie - Canada

Dans ce tableau, il est possible d'analyser chronologiquement les tendances énergétiques à l'échelle nationale pour certains points de repère, à savoir:

1. Production, sources primaires.
2. Disponibilité brute, disponibilité de chaque forme d'énergie (sauf pétrole brut); moins la production de coke, la production de gaz de fours à coke, la production d'énergie électrique (thermique), GPL utilisés pour la production de produits pétroliers raffinés.
3. Consommation intérieure nette (disponibilité nette primaire et secondaire, excluant pétrole brut).
4. Autoconsommation (moins la quantité de pétrole brut utilisé par les producteurs).
5. Utilisation non énergétique.
6. Utilisation énergétique.
7. Total, mines.
8. Total, fabrication.
9. Total, industrie.
10. Total, transports (voir l'explication au tableau S3).
11. Secteurs résidentiel et agricole.
12. Secteur public et autres secteurs commerciaux.

Dans les années antérieures à 1983, on a exprimé l'hydro-électricité et l'électricité nucléaire en équivalent d'électricité thermique (à raison de 10.5 mégajoules par kilowatt-heure) pour les catégories 1 et 2 ci-dessus, ceci n'est plus fait.

For the calculation of year to year changes, data for 1982 and earlier years have been recalculated to reflect the changes in natural gas conversion rates. See note on page xv.

As an aid to analysis, degree days below 18.0° Celsius are shown. The provincial and national figures have been developed by utilizing recordings at certain selected stations considered to be representative of the geographic area concerned.

Table S1 - Energy Summary Table

This table is intended to allow an analysis of energy trends for items presented in Table S at the provincial level for the current quarter and year.

Table S2 - Components of Major Energy Totals

This table also is intended to allow an analysis of trends in energy, but in the five basic energy forms. The method of compiling the data is the same as that employed in Table S1.

Table S3 - End Uses of Major Fuel Types

This table is intended to analyse the disposition of the five basic energy forms, viz coal and coke, oil products and LPG's, natural gas, electricity, and steam. It should be emphasized that the data are not additive; for example, natural gas used to generate electricity is shown under the "natural gas" energy form, while the disposition of electric energy includes that amount of electricity produced at gas fired stations.

Furthermore, an element of "double-counting" is included in the "coal and coke" energy form in that coal used to produce coke is shown at the category "coke ovens", while the disposal of the coke produced is also accounted for in categories such as industrial use.

In the transportation sector, only the use of fuel by transportation industries (defined as railways, airlines, marine, pipelines, road and urban transit, and retail pump sales) is included. Excluded is that fuel which may have been used by other sectors (e.g., agriculture) for transportation but which is included within the quantities reported for such sectors.

Note that solid wood wastes and spent pulping liquor, shown as a Note below Table G, are not included in Summary Tables S1, S2 and S3. The amounts of these fuels used in electrical generation in the Pulp and Paper

Pour obtenir les variations annuelles, on a recalculé les données pour 1982 et les années antérieures en tenant compte des nouveaux taux de conversion du gaz naturel. Voir la note à la page xv.

Pour faciliter l'analyse, on indique les jours-degrés au-dessous de 18.0° Celsius. Les chiffres pour le Canada et les provinces ont été calculés à partir des lectures prises à certaines stations considérées comme représentatives de la région géographique en question.

Tableau S1 - Tableau sommaire de l'énergie

Ce tableau entend permettre l'analyse des tendances énergétiques pour les postes du tableau S à l'échelle provinciale pour le trimestre et l'année courante.

Tableau S2 - Répartition de l'énergie

Ce tableau entend également permettre l'analyse des tendances d'énergie mais pour les cinq principales formes d'énergie. La méthode utilisée pour la compilation des chiffres est celle indiquée dans le tableau S1.

Tableau S3 - Utilisation finale de chaque combustible principal

Ce tableau entend permettre l'analyse de l'écoulement des cinq formes primaires d'énergie, le charbon et le coke, les produits pétroliers et GPL, le gaz naturel, l'électricité et la vapeur. Veuillez prendre note que les chiffres ne peuvent pas être comptabilisés; exemple le gaz naturel utilisé dans la production de l'électricité apparaît dans la forme d'énergie "gaz naturel" bien que la distribution de l'électricité inclus ce montant d'électricité produite par les centrales alimentées au gaz.

De plus une certaine duplication existe dans la forme d'énergie "charbon et coke" en ce sens que le charbon utilisé dans la fabrication du coke apparaît dans la section "four à coke" bien que la distribution du coke fabriqué apparaît aussi dans certaines catégories comme l'usage industriel.

Dans le secteur du transport, on a inclus seulement les combustibles utilisés par l'industrie défini comme chemins de fer, lignes aériennes, maritimes, pipelines, transport commercial et en commun, et ventes au détail (pompes). Ainsi on a exclu le combustible qui a peut-être été utilisé aux fins de transport dans d'autres secteurs (exemple l'agriculture), mais qui a été inclus avec les quantités indiquées pour de tels secteurs.

À noter que les déchets solides de bois et la lessive de pâte épuisée indiqués comme nota au bas du tableau G ne sont pas compris aux tableaux sommaires S1, S2 et S3. Les quantités de ces combustibles utilisés dans la production d'énergie

Industry, as shown in Table G, are also not included in the Summary Tables. However, the electricity produced from these sources forms part of the energy form "electricity" shown in these summary tables.

Tables A and B - Primary and Secondary Energy

These tables summarize data on primary and secondary energy forms. Energy products with both primary and secondary sources (liquefied petroleum gases, electricity and steam) have all their disposition accounted for under the primary form of each.

Coal. Data presented here are the summation of data presented in Table F.

Natural gas. See the following note on Natural Gas. Since in this publication "marketable gas", not the production of raw gas, is the first measuring point, there is no producer consumption shown, although obviously the producing industry does consume a substantial quantity of gas in its operations.

Gas plant of NGL's. Includes propane, butane and ethane, see Table 14 for the component breakdown. The supply shown here measures only production from gas plants and does not include petroleum refinery produced LPG'S. Condensate is included with crude oil.

Hydro and nuclear electricity. Production is for all hydro and nuclear generated electricity. Since it is assumed that most exports and imports of electric energy are from primary sources (i.e., hydro and nuclear), and because of the difficulties involved in determining which exports/imports are derived from, e.g., coal, all exports and imports are indicated as being from primary sources.

Steam. See the following note on Steam.

Coke oven gas. See note on Coke Oven Gas.

Refined petroleum products. Data presented are the summation of data given in Tables C and D, including data on non-energy products.

Thermal electricity. Data presented here are the summation of data given in Table G. Exports, imports, producer consumption (which includes line losses etc.) are included under hydro and nuclear electricity.

électrique dans l'industrie des pâtes et papiers telles qu'indiquées au tableau G, ne sont pas comprises non plus dans les tableaux sommaires. Cependant, l'électricité produite à partir de ces sources est incluse dans la catégorie "électricité" indiquée dans les tableaux sommaires.

Tableaux A et B - Énergie primaire et secondaire

Ces tableaux résument les données sur les formes d'énergie primaire et secondaire. Les produits énergétiques consommés provenant de sources primaires et secondaires (gaz de pétrole liquéfié, électricité et vapeur) figurant intégralement comme forme primaire de chacune.

Charbon. Les données présentées sont le résultat de la sommation des données du tableau F.

Gaz naturel. Voir la note qui suit à ce sujet. Étant donné que dans la présente publication, c'est "le gaz marchand", et non la production de gaz brut, qui est le premier instrument de mesure, on n'indique pas l'autoconsommation, même si l'industrie productrice consomme évidemment une quantité considérable de gaz dans le cours de ses activités.

Usine de traitement des liquides de gaz naturel. Comprend le propane, le butane et l'éthane. Leur répartition figure au tableau 14. Les quantités disponibles indiquées ne représentent que la production des usines de traitement du gaz et n'englobent donc pas les gaz de pétrole liquéfiés produits par les raffineries de pétrole. Le condensat est inclus avec le pétrole brut.

Hydro-électricité et électricité nucléaire. La production représente la totalité de l'électricité produite sous ces deux formes. On présume que la majorité des importations et des exportations d'énergie électrique proviennent de sources primaires (e.g., hydro et nucléaire), et, parce que les difficultés encourues pour déterminer la part des importations et des exportations d'électricité dérivée d'autres sources (e.g., le charbon) sont énormes, on classifie toutes les importations et les exportations d'électricité comme étant de sources primaires.

Vapeur. Voir la note qui suit à ce sujet.

Gaz de fours à coke. Voir la note à ce sujet.

Produits pétroliers raffinés. Les données présentées sont le résultat de la sommation des données des tableaux C et D, y compris les données sur les produits non énergétiques.

Électricité thermique. Les données présentées sont le résultat de la sommation des données du tableau G. Les exportations, les importations, l'autoconsommation (qui comprend les pertes de transport, etc.) figurent sous les rubriques de l'hydro-électricité et de l'électricité nucléaire.

Tables C and D - Refined Petroleum Products

Although all of the supply data used in these tables, and in Table E, are based on data which are published in **Refined Petroleum Products (RPP)**, Catalogue 45-004, the availability figure published does not agree with the net sales figure published in the RPP. For details on the manner in which a reconciliation can be made for the years prior to 1982 please refer to previous issues.

Effective from the first quarter of 1982, the line "other adjustments" was added. The composition of this line in relation to the RPP is as follows:

- + receipts from reporting companies
- + receipts from non-reporting companies
- deliveries to reporting companies
- losses and adjustments
- transfers to feedstock(1)
- = other adjustments (as used in this publication)

The result of this change in presentation has been that the **statistical difference** in most instances has been reduced and that **availability less producers consumption** will now agree with **net sales** as presented in the RPP publication with the following exceptions:

- interprovincial transfers may be modified to reflect movements which are indicated by supplementary data used in the completion of the demand section of the tables.
- stock changes for diesel, light fuel oil and heavy fuel oil may include changes in inventory held by certain electric utility stations. Prior to 1982, only heavy fuel inventories were adjusted.

(1) A comparison of refinery inputs (line 12, tables A & B) against production of refinery petroleum products (line 1) presents an inflated volumetric gain in the refinery process. This inflated gain results from the partially refined products used as input in the refinery process that are shown in line 7 of the tables, rather than in line 12. That is - refinery inputs are understated by the amount of this transfer to refinery feedstock.

Tableaux C et D - Produits pétroliers raffinés

Même si toutes les données sur la disponibilité totale d'énergie présentées dans ces tableaux et dans le tableau E se fondent sur des chiffres publiés dans **Produits pétroliers raffinés (PPR)** (n° 45-004 au catalogue), les données publiées sur la disponibilité ne concordent pas avec le total des ventes nettes figurant dans PPR. Pour les détails sur la façon dont une reconciliation peut être faite pour les années antérieures à 1982, veuillez consulter les publications précédentes.

À partir du premier trimestre de 1982 la ligne "autres ajustements" a été ajoutée. La composition de cette nouvelle rubrique, pour ce qui est des PPR:

- + arrivages des sociétés déclarantes
- + arrivages des sociétés non déclarantes
- livraisons aux sociétés déclarantes
- pertes et ajustements
- retours pour alimentation(1)
- = autres ajustements (au sens que lui donne cette publication).

Par suite de ce changement de présentation, la **différence statistique** fut plus faible dans la plupart des cas et la **disponibilité**, moins l'**autoconsommation**, correspondra dorénavant aux **ventes nettes** telles que présentées dans la publication sur les PPR, sauf dans les cas suivants:

- les transferts inter-provinces seront modifiés le cas échéant pour refléter les mouvements qui ressortent des données supplémentaires utilisées pour compléter la partie des tableaux ayant trait à l'écoulement.
- les variations des stocks de carburant diesel, de mazout léger et de mazout lourd pourront comprendre les variations des stocks détenus par certaines centrales électriques. Avant 1982, seuls les stocks de mazout lourd étaient rectifiés.

(1) Le gain volumétrique que l'on peut dériver dans les tableaux A et B de la comparaison entre les intrants des raffineries (ligne 12) et la production de produits pétroliers raffinés (ligne 1), est supérieur au gain réel enregistré. Ceci résulte du fait que des produits pétroliers partiellement raffinés sont utilisés comme intrants dans les raffineries et que ces quantités sont indiquées à la ligne 7 plutôt qu'à la ligne 12. Conséquemment, les intrants des raffineries sont sous-estimés par les montants des retours comme charges à l'alimentation des raffineries.

- additional imports not included in the RPP may be included.
- timing of data selection can affect the calculation of supply data. That is, the inclusion or exclusion of RPP revisions may cause different results.

Because of confidentiality and because of the way in which certain fuels are used, a specific publication pattern has been employed in the body of this report. This pattern is detailed in the following text table.

The summation of these tables appears as Column 10 of Tables A and B, which obviously therefore exclude "refinery loss" data reported in **Refined Petroleum Products**.

Table E - Non-energy Refined Petroleum Products

This table provides detailed information for the data found in Tables C and D, Column 11.

Table F - Coal Details

This table provides detailed information for the data found in Tables A and B, Column 1.

Table G - Electricity Generated from Fossil Fuel

This table, based on supplementary information, provides the basis for the thermal electricity shown in Column 11 of Tables A and B.

Other manufacturing. In some instances the classification "other manufacturing" is used when no breakdown of the component industries of the manufacturing sector is provided. This is done to maintain the ability to summate the tables.

Producer consumption. Producer consumption as measured here is the consumption by the producing industry of its own produced fuel - for example refined petroleum products consumed by the refining industry. It does not include consumption of energy forms produced by other energy supply industries - for example, it would exclude the use of natural gas by the refining industry. In the case of electricity it includes transmission losses, adjustments, etc.

- des importations additionnelles, non montrées dans la publication sur les RPP, peuvent être incluses.

- le moment de la sélection des données influera parfois sur le calcul des données sur la disponibilité. Autrement dit, les résultats pourront varier selon que l'on aura ou non pris en compte les révisions pour le PPR.

À cause de la confidentialité et aussi à cause de la façon dont certains combustibles sont utilisés, on a employé un schéma spécifique pour la publication des chiffres dans ce bulletin. Ce schéma est indiqué dans le tableau explicatif suivant.

La sommation de ces tableaux donne la colonne 10 des tableaux A et B qui, évidemment, va exclure les données sur les "pertes des raffineries" déjà indiquées dans **Produits pétroliers raffinés**.

Tableau E - Produits pétroliers raffinés non énergétiques

Ce tableau fournit des renseignements détaillés au sujet des données figurant dans la colonne 11 des tableaux C et D.

Tableau F - Renseignements détaillés sur le charbon

Ce tableau fournit des renseignements détaillés au sujet des données figurant dans la colonne 1 des tableaux A et B.

Tableau G - Électricité produite à partir de combustibles fossiles

Ce tableau, qui utilise des renseignements complémentaires, sert de base aux données sur l'électricité thermique qui figurent dans la colonne 11 des tableaux A et B.

Autre fabrication. Dans certains cas, on utilise la classification "autre fabrication" lorsque la répartition des industries composantes du secteur manufacturier n'est pas disponible. Cette mesure vise à conserver la possibilité d'effectuer la sommation des tableaux.

Autoconsommation. Il s'agit ici de l'autoconsommation du pétrole produit par l'industrie - par exemple, les produits pétroliers raffinés consommés par l'industrie du raffinage du pétrole. Elle ne comprend pas la consommation de formes d'énergie produites par d'autres industries du secteur énergétique; ainsi, elle ne tient pas compte du gaz naturel consommé par l'industrie du raffinage du pétrole. Dans le cas de l'électricité, elle comprend les pertes de transport, les rectifications, etc.

TEXT TABLE I. How Industry Usage Data are Combined

TABLEAU EXPLICATIF I. Comment sont combinées les données sur l'utilisation des produits dans les différentes branches d'activité

| | | Motor gasoline | Kerosene and stove oil | Diesel fuel oil | Light fuel oil | Heavy fuel oil | Aviation gasoline | Aviation turbo fuel | Lubricating oils and greases |

Pub. = Published - Publier.

Numbers indicate with which line in the product column the industry is combined.

Les numéros dans les colonnes des produits renvoient aux lignes correspondant aux branches d'activité.

(1) Component of total industrial.

(1) Une composante de l'ensemble des branches d'activité (total industriel).

(2) Effective 1983; formerly combined in line 28, now split between lines 20 and 28.

(2) À partir de 1983; correspondait auparavant à la ligne 28, se divise maintenant entre la ligne 20 et la ligne 28.

(3) Effective 1983; formerly combined in line 20, now split between lines 20 and 28.

(3) À partir de 1983; correspondait auparavant à la ligne 20, se divise maintenant entre la ligne 20 et la ligne 28.

(4) Effective 1983; formerly combined in line 26, now split between lines 26 and 28.

(4) À partir de 1983; correspondait auparavant à la ligne 26, se divise maintenant entre la ligne 26 et la ligne 28.

(5) Was published in 1982, due to space limitations is not now published, although components are. Thus data point can be obtained by adding lines 19, 27, 28 and 29.

(5) Était publié en 1982, n'est pas publié maintenant faute d'espace, mais les composantes le sont. On peut obtenir une donnée simple en additionnant les lignes 19, 27, 28 et 29.

(6) Effective 1983; formerly combined in line 43, now split between lines 42 and 43.

(6) À partir de 1983; correspondait auparavant à la ligne 43, se divise maintenant entre la ligne 42 et la ligne 43.

(7) Effective 1983; formerly combined in line 45, now split between lines 42, 44 and 45.

(7) À partir de 1983; correspondait auparavant à la ligne 45, se divise maintenant entre la ligne 42, 44 et la ligne 45.

Data Sources

The data sources for this publication are mainly monthly surveys of the major energy suppliers. Certain salient points are worthy of note.

Gas Plant NGL's

Gas plant propane and butane supply is based on information derived from data collected by the National Energy Board (NEB). Starting with 1982, the data line **other adjustments** is being calculated in a similar manner to the item other adjustments shown for the RPP. Production and inventories of ethane from gas plants is obtained from data provided by the Alberta Energy Resources Conservation Board (AERCB). Starting with the fourth quarter of 1983, ethane usage has been estimated based on known supply and export data.

Natural Gas

In this publication natural gas "production" is, in effect, receipts of gas by the gas pipeline industry or marketable natural gas, i.e., natural gas available after processing/reprocessing stage. This concept is different from that used in Catalogue 57-207 where raw natural gas production was used. This change in concept affects the lines "production" and "producers consumption". Estimates for the non-energy use of natural gas have been derived from monthly statistics on the production of anhydrous ammonia, methanol and carbon black. The estimates take into account that only certain companies producing the products listed above use natural gas as a feed stock. Gas used as fuel associated with feedstock gas is shown under "Industrial Chemicals".

Conversion factors used for natural gas are subject to fluctuations due to the varying heat content of gas produced from different fields, and the processes to which the gas is subjected before being marketed. For the period 1978 to 1982 inclusive a standard conversion factor of 37.23 terajoules for gigalitre was used for natural gas data presented in this publication. Starting with the publication of the fourth quarter of 1983, to reflect the varying nature of gas heating content, a current national average (annual) heat content value will be used. This will cause some distortion of historical trends. However, users

Sources des données

Les sources des données de la présente publication sont essentiellement des enquêtes mensuelles auprès des principaux producteurs d'énergie. Certains points saillants méritent d'être soulignés.

L.G.N. des usines de gaz

Les statistiques de disponibilité concernant le propane et le butane produits dans les usines de gaz sont basées sur des chiffres recueillis par l'Office national de l'énergie (O.N.E.). À partir de 1982, la ligne **Autres ajustements** est calculée de la même façon que le poste Autres ajustements dans les tableaux sur les PPR. Les statistiques concernant la production et les inventaires d'éthane par les usines de gaz sont tirées des chiffres recueillis par Alberta Energy Resources Conservation Board (AERCB). À partir du quatrième trimestre de 1983, on a estimé l'utilisation de l'éthane en se basant sur les données connues concernant l'approvisionnement et l'exportation.

Gaz naturel

Dans cette publication, la "production" de gaz naturel représente en fait le gaz naturel destiné à l'industrie des gazoducs, ou le gaz naturel commercialisable, c'est-à-dire le gaz naturel disponible après traitement et retransformation. Ce concept diffère de celui utilisé dans la publication n° 57-207 au catalogue, qui utilisait la production de gaz naturel brut. Ce changement de concept influe sur les lignes "production" et "autoconsommation". On a estimé l'utilisation non énergétique du gaz naturel à partir de statistiques mensuelles sur la production d'ammoniaque anhydre, de méthanol et de carbone. Ces estimations tiennent compte du fait que seules certaines des entreprises fabriquant les produits énumérés ci-dessus utilisent le gaz naturel comme charge d'alimentation. Le gaz utilisé comme combustible avec un gaz d'alimentation figure sous la rubrique "produits chimiques industriels".

Les facteurs de conversion utilisés pour le gaz naturel sont sujets à des fluctuations en raison de la variation de l'enthalpie du gaz produit dans différents secteurs et des procédés auxquels il est soumis avant d'être commercialisé. Pour la période de 1978 à 1982 inclusive, on s'est servi du facteur de conversion courant de 37.23 terajoules par gigalitre pour les données sur le gaz naturel présentées dans cette publication. À partir du quatrième trimestre de 1983, on utilisera la valeur courante nationale moyenne (annuelle) de l'enthalpie de manière à tenir compte des variations. Cette façon de procéder faussera quelque peu les tendances historiques. Toutefois, les utilisateurs

can revise these data to reflect varying heat contents by employing the following conversion factors:

| | |
|-------------|----------------------|
| 1978 - 37.9 | terajoules/gigalitre |
| 1979 - 37.9 | " " |
| 1980 - 37.9 | " " |
| 1981 - 37.7 | " " |
| 1982 - 38.1 | " " |
| 1983 - 38.0 | " " |

The 1983 factor was based on the 1983 average heat content, for Canada, reported by natural gas distributors, as published in Catalogue 55-002, **Gas Utilities**. In the future the previous years' factor will be used for the calculation of the first three quarters of any year. When the conversion factor for the year in total is determined, it will be implemented in the fourth quarter publication which will incorporate also revisions to data for the entire year. Data for the current year will be revised in the CANSIM data base for the whole year at the same time.

Non-energy sales of natural gas are shown only for provinces where the data is not confidential. Confidentiality constraints prevent other provincial figures being shown. As a result Canada totals are a sum of provincial figures published.

Coke Oven Gas

Figures for the production of coke oven gas are estimated from known coal coke production data. The thermal value of coal charged to coke ovens less the thermal value of the resultant coke production must equal the coke oven gas production, together with an allowance for heating and losses.

Steam

Steam **sold** is now included in the balance sheets. This item includes only known steam sales of large producers and therefore excludes any steam produced for own consumption. The primary production shown is that from nuclear sources with secondary production being shown under "transformed from other fuels" (Line 13). This method of treating the transformation of a primary form into a secondary form differs from that used for all other secondary forms in that the production of other secondary energy forms appears as "production" (i.e., Line 1) under the relevant columns. Additional sources of primary steam, i.e., biomass and geothermal, will be included if they become significant.

peuvent remédier à la situation en employant les facteurs de conversion suivants:

| | |
|-------------|----------------------|
| 1978 - 37.9 | terajoules/gigalitre |
| 1979 - 37.9 | " " |
| 1980 - 37.9 | " " |
| 1981 - 37.7 | " " |
| 1982 - 38.1 | " " |
| 1983 - 38.0 | " " |

Le facteur de 1983 est basé pour le Canada, sur l'enthalpie moyenne de 1983, déclarée par les distributeurs de gaz naturel, d'après la publication **Services de gaz** (n° 55-002 au catalogue). On utilisera à l'avenir le facteur des années précédentes pour calculer les données se rapportant aux trois premiers trimestres d'une année donnée. Une fois le facteur de conversion établi pour toute l'année, on l'appliquera dans la publication du quatrième trimestre, qui présentera les données révisées pour l'ensemble de l'année. On révisera en même temps les données du CANSIM pour toute l'année en cours.

Les ventes non énergétiques de gaz naturel ne sont rapportées que pour les provinces ou de telles données ne sont pas confidentielles. Les règles de confidentialité ne permettent aucune divulgation des chiffres pour les autres provinces. Cela dit, le total pour le Canada est donc la somme des chiffres provinciaux publiés.

Gaz de fours à coke

Les chiffres sur la production de gaz de fours à coke sont estimés à partir des données connues sur la production de coke de houille. La valeur thermique de la houille chargée dans les fours à coke moins la valeur thermique du coke ainsi produit doit égaler la production de gaz de fours à coke, rectifiée pour tenir compte de la chaleur et des pertes.

Vapeur

Les **ventes** de vapeur sont maintenant comprises dans les bilans. Ce poste comprend uniquement les ventes connues des grands producteurs et exclut par conséquent la vapeur produite pour consommation propre. La production primaire indiquée est celle tirée de sources nucléaires; la production secondaire figure comme un poste négatif sous la rubrique "Transformé en autres combustibles" (ligne 13). Cette façon de traiter la transformation d'une énergie primaire en une forme d'énergie secondaire diffère de celle utilisée pour toutes les autres formes secondaires du fait que la production d'autres formes d'énergie secondaire apparaît comme "production" (c.-à-d., la ligne 1) sous les colonnes appropriées. Les autres sources de vapeur primaire, biomasse et géothermique par exemple, seront incluses quand elles deviendront suffisamment importantes.

Secondary steam generation, as shown in this publication, can be the product of dedicated steam plants (in which case the fuels used are indicated) or the result of co-generation (in which case no fuels are shown) of steam and electricity. For the dedicated plants a measure of the efficiency of the transformation of fossil fuel into steam can be made, whereas for co-generation plants no such measure is possible since all fuels used are considered to have been used in the generation of electricity.

In the natural units part of Tables A and B, where no inter-energy summation is possible, the secondary production of steam is shown as a negative number on Line 13. This technique allows for no impact on the "total" columns yet it allows the "steam" column to retain its arithmetic sense. In the terajoule part of Tables A and B, however the treatment of secondary steam is different. Production of secondary steam is **not** shown in Line 13 in order to enable the proper summation of steam generation for "total primary sources" and "total primary and secondary" columns. Line 14 "net supply" shows in the steam column, a value which includes both primary and secondary steam production. This enables the summation of the various **individual** components of "total primary and secondary" on Line 14. Net supply of "total primary sources" excludes any secondary steam and gives the true value from primary sources. This approach ensures that the columns "total primary sources" and "total primary and secondary" retain their arithmetic sense.

Fuels Used in Thermal Electric Generation

Utilities

For the year 1976, coal used in thermal generation stations was reported in the "Coal Users Survey", while generation from such stations was known from annual surveys. Reasonably accurate estimates of generation from coal by quarter were derived. Similarly, gas used by electric utilities was available from the gas utilities monthly survey (unpublished data), while electric generation from gas was known on an annual basis. Again, using these two factors, reasonable quarterly estimates of electricity generation from gas were obtained. All other thermal generation was attributed to oil products.

La production secondaire de vapeur, telle qu'indiquée dans ce bulletin, peut être le produit d'usines dédiées à la production de vapeur (en tel cas, les combustibles utilisés sont indiqués), ou le résultat de coproduction d'électricité et de vapeur (en tel cas, aucun combustible est montré). Pour les usines dédiées à la vapeur, une mesure du rendement dans la transformation des combustibles en forme de vapeur peut être calculée, alors que pour les usines de coproduction, aucune mesure semblable ne peut être calculée puisqu'on considère que tout le combustible est utilisé pour la production d'électricité.

Dans la partie des tableaux A et B exprimée en unités naturelles, où il est impossible de procéder à des sommations des différentes formes d'énergie, la production secondaire de vapeur figure comme une inscription négative à la ligne 13. Les colonnes "total" ne sont pas touchées, tandis que la colonne "vapeur" conserve sa signification arithmétique. Dans la partie des tableaux A et B exprimée en terajoules, le traitement de la vapeur secondaire est toutefois différent. La production de la vapeur secondaire **ne** figure **pas** à la ligne 13 afin de permettre une sommation appropriée de la production de vapeur dans les colonnes "total des sources primaires" et "total primaire et secondaire". La ligne 14, c'est-à-dire la disponibilité nette indique dans la colonne "vapeur", un nombre qui englobe la production de la vapeur primaire et secondaire. Ceci permet la sommation des **diverses** composantes de la colonne "total primaire et secondaire" à la ligne 14. La disponibilité nette du "total des sources primaires" exclut toute vapeur secondaire et donne la valeur réelle des sources primaires. En procédant ainsi, les colonnes du "total des sources primaires" et du "total primaire et secondaire" conservent leur signification arithmétique.

Combustibles utilisés dans la production d'électricité thermique

Services publics

Pour 1976, les centrales thermiques ont déclaré leur consommation de charbon dans le cadre de l'enquête sur le charbon et leur production, en réponse à des enquêtes annuelles. À partir de ces données, on a pu dériver des estimations satisfaisantes de la production d'électricité par trimestre. De même, les déclarations mensuelles des services de gaz (données inédites) ont indiqué la consommation de gaz des services de distribution d'électricité alors que les données annuelles ont permis de connaître la production d'électricité des centrales à gaz. Ici encore, à partir de ces deux facteurs, on a pu obtenir des estimations trimestrielles satisfaisantes de la production d'électricité par le gaz. Le reste de la production a été attribué aux produits pétroliers.

In 1977 and subsequent years, the usage of oil, gas and coal for thermal generation obtained from the utilities is used for estimates of generation by quarter and by fuel type. Estimates for non-reporting companies are also now included.

Industrial Generation

In 1977, estimates of fuel used were based on annual survey results, with fuels allocated quarterly in accordance to the quarterly pattern of net generation by company. Within these estimates, conventional steam generation by industry is assumed to have an efficiency of 65%, or a heat rate of 5.537 megajoules/kilowatt hours. When figures supplied by industry approximated these values, no adjustments were made.

This approach differs from that used prior to 1976 in Catalogue 57-207, where the industrial use of energy for conventional generation was assumed to include the energy required to produce the initial steam and was not restricted to the energy required to super heat such steam for use in the turbine/generator. Such industrial co-generation is normal where steam is produced primarily for process heating applications and some electrical generation is performed as a by-product operation. (Utilities, however, are viewed as being in the business of producing electricity and all heat losses are ascribed to electrical generation yielding maximum possible efficiencies of about 35% to 40%.) For gas turbine and internal combustion generation, reported industry figures were left unadjusted.

For years subsequent to 1977, estimates of fuels used are based on company monthly net generation data. Efficiencies and fuel types are those obtained from the previous year's annual report from the company with efficiencies adjusted as necessary.

Crude Oil

For reasons of confidentiality, imports of crude oil have been excluded from the tables relating to the individual Atlantic provinces. Similarly, all subsequent data points for "crude oil", for "total primary sources" and for "total primary and secondary sources" do not reflect such imports. However, Table 2, the Atlantic provinces in total, does show imports of crude oil into the region as a whole, and as a consequence, the data contained therein are not the sum of the individual Atlantic provinces.

À partir de 1977, les données sur l'utilisation du pétrole, du gaz et du charbon obtenues auprès des services publics servent à estimer la production par trimestre et par type de combustible. Les estimations pour les compagnies non déclarantes sont maintenant comprises au même titre.

Production industrielle

Pour 1977, les estimations sur l'utilisation du combustible sont fondées sur les résultats d'enquêtes annuelles, l'utilisation étant répartie chaque trimestre en fonction de la tendance trimestrielle de la production nette de chaque entreprise. À même ces estimations, le rendement de la production industrielle de vapeur est fixé à 65% ou à un taux calorifique de 5.537 megajoule/kilowatt-heures. Lorsque les chiffres fournis par l'industrie se rapprochent de ces estimations, on ne fait aucun ajustement.

Cette méthode diffère de celle qui avait été utilisée avant 1976 dans la publication n° 57-207 au catalogue, qui supposait que l'utilisation industrielle de l'énergie pour la production courante comprenait l'énergie nécessaire pour produire la vapeur initiale en plus de celle requise pour surchauffer cette vapeur aux fins des turbines/génératrices. Ce type de coproduction industrielle est normal lorsque la vapeur sert à produire essentiellement de la chaleur industrielle, l'électricité n'étant qu'un sous-produit. (Toutefois, les services publics étant considérés avant tout comme des producteurs d'électricité, toutes les pertes de chaleur sont attribuées à la production électrique pour un rendement maximum possible d'environ 35% à 40%.) Pour la production des turbines à gaz et à combustion interne, aucun ajustement n'a été apporté aux chiffres de l'industrie.

Depuis 1977, les estimations sur l'utilisation du combustible sont fondées sur la production mensuelle nette, par entreprise. Les rendements et les types du combustible sont ceux établis par l'entreprise dans les questionnaires couvrant l'année précédente, avec certains ajustements pour les rendements, là où ils s'avéraient nécessaires.

Pétrole brut

Pour des raisons de confidentialité, les importations de pétrole brut ne figurent pas dans les différents tableaux sur chacune des provinces de l'Atlantique. De même, toutes les données simples subséquentes pour le "pétrole brut", le "total des sources primaires" et le "total, primaire et secondaire" ne tiennent pas compte de ces importations. Toutefois, les données du tableau 2 sur l'ensemble des provinces de l'Atlantique incorporent les importations de pétrole brut dans l'ensemble de la région et ne sont donc pas simplement la somme des données présentées pour les différentes provinces de l'Atlantique.

Inventory data used in the stock change shown on Line 5 are based on two sources, pipeline inventories (which are source of origin data and do not indicate the province where held) and refinery inventories. The net effect of this method of calculation stocks change is to over state some provincial data and understate other provincial data. At the Canada level however these differences counter balance. Further, the line "statistical difference" is similarly influenced by this method of calculation.

Alternative Energy Forms

In the main tables of this publication alternative energy sources are not included, although it has been estimated that these sources account for more than 7% of Canada's energy requirements.(1) However in the tables, electricity produced by biomass (wood and spent pulping liquor) has been included. Also included, as a footnote following Table G in the second and fourth quarters issues, is the wood waste and spent pulping liquor used by the pulp and paper industry in the generation of process steam, steam for generating electricity as well as for other heating purposes.

Advance Information

It is possible to obtain some of the information contained in this publication some three to four weeks before it is available in printed form. There are two possibilities:

1. Statistics in natural units only (with no terajoule equivalents) are available on computer tape. Data relate to the quarter under review and individual preceding quarters for the year (i.e. no cumulative data). The price is \$50 and a computer tape must be provided. Please contact the Energy Section (M.A.P.I.D.), Statistics Canada, Ottawa, K1A 0T6 (telephone: 613-990-9823).

Pour calculer les variations des stocks telles qu'indiquées à la ligne 5, deux sources distinctes de statistiques d'inventaires sont utilisées: les stocks des pipe-lines (basés sur la provenance des quantités expédiées sans égard à la province d'entreposage), et les stocks des raffineries. L'effet net de cette méthode de comptabilisation est de sous-estimer le niveau de variations de stocks de certaines provinces, et de sur-estimer cette même mesure dans les autres provinces. Toutefois, en agrégeant au plan canadien, ces différences se contrebalancent entre elles. En conséquence, la ligne "Différence statistiques" est aussi influencée par la dite-méthode.

Sources d'énergie alternatives

Les sources d'énergie alternatives ne sont pas incluses dans les tableaux de ce bulletin, bien qu'on estime que ces sources répondent à plus de 7% des besoins énergétiques du pays(1). Cependant, l'électricité produite par la biomasse (bois et lessive de pâte épuisée) est incluse dans les tableaux. Vous trouverez aussi, comme renseignements supplémentaires au tableau G dans les publications des deuxièmes et quatrièmes trimestres, les déchets de bois et la lessive de pâte épuisée utilisés par l'industrie de pâtes et papier afin de produire de la vapeur utilisée pour la transformation, pour la production d'électricité et pour d'autres usages à l'intérieur des usines.

Information anticipée

Il est possible d'obtenir certaines informations contenues dans cette publication, cela quelque trois ou quatre semaines avant la copie imprimée. Il existe deux possibilités:

1. Les statistiques en unités naturelles seulement (sans les équivalents en térajoules) sont disponibles sur bande magnétique; les données se rapportent au trimestre en cours ainsi qu'aux trimestres précédents de l'année (c.-à-d. non cumulatif). Le coût est de \$50 et une bande magnétique doit être fournie. Prière de s'adresser à la Section de l'énergie (D.I.M.E.P.), Statistique Canada, Ottawa, K1A 0T6 (téléphone 613-990-9823).

(1) Canada Energy Supply and Demand 1983-2005, Summary Report, page 19, National Energy Board.

(1) L'Énergie au Canada, offre et demande 1983-2005, rapport sommaire, page 19, l'office national de l'énergie.

2. The Canadian Socio-Economic Information Management System (CANSIM), which is Statistics Canada's computerized data bank, contains data in terajoules from the A and C tables of this publication by quarter from 1978 to date. Refer to CANSIM matrices 7976 to 8001.

Note: Data published on an annual basis in publication **Detailed Energy Supply and Demand in Canada**, Catalogue 57-207, are available from 1958 to 1977 in CANSIM matrices 7140 to 7436.

2. Le système canadien d'information socioéconomique (CANSIM), qui est la banque de données informatisées de Statistique Canada, renferme des données en térajoules tirées des tableaux A et C de la présente publication, présentées par trimestre de 1978 jusqu'à aujourd'hui. Se reporter aux matrices 7976 à 8001 du CANSIM.

Nota: Les données publiées sur une base annuelle dans la publication **Disponibilité et écoulement d'énergie au Canada**, n° 57-207 au catalogue, sont disponibles pour les années 1958 à 1977 dans les matrices 7140 à 7436 du CANSIM.

LES LIGNES 1-12.15 POUR USINES DE GAZ SEULEMENT

Quarterly report on energy supply-demand in Canada

1984-II

Bulletin trimestriel - disponibilité et écoulement d'énergie au Canada

1984-II

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Energy Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9823) or to the Statistics Canada reference centre in:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |
| Halifax (426-5331) | Winnipeg (949-4020) |
| Montréal (283-5725) | Regina (359-5405) |
| Ottawa (990-8116) | Edmonton (420-3027) |
| Toronto (966-6586) | Vancouver (666-3691) |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section de l'énergie,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9823) ou au centre de consultation de Statistique Canada à:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |
| Halifax (426-5331) | Winnipeg (949-4020) |
| Montréal (283-5725) | Regina (359-5405) |
| Ottawa (990-8116) | Edmonton (420-3027) |
| Toronto (966-6586) | Vancouver (666-3691) |

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres régionaux de consultation.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

.. figures not available.

... figures not appropriate or not applicable.

- nil or zero.

-- amount too small to be expressed.

P preliminary figures.

R revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

+ disposition of this secondary product is shown under the primary form thereof.

NOTE

Data for any quarter in a calendar year may be revised and included in the cumulative tables of a subsequent quarterly issue of that year. Given that further revisions to submitted data are received after the publication of the fourth quarter issue of any given year, it should be borne in mind that the statistical series shown in this publication are not necessarily the same in every detail as those shown in other annual publications produced by the Energy Section of Statistics Canada. These latter publications are usually published after the fourth quarter issue of this publication.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

- néant ou zéro.

-- nombres infimes.

P nombres provisoires.

R nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

+ la disposition de ce produit secondaire est comprise dans les données relatives à la forme primaire de ce même produit.

NOTA

On peut réviser et inclure les données d'un trimestre d'une année civile dans les tableaux cumulatifs d'un numéro trimestriel ultérieur de cette même année. Comme d'autres révisions aux données soumises sont reçues après publication du numéro du quatrième trimestre d'une année donnée, il faut se rappeler que les séries statistiques figurant dans cette publication ne sont pas nécessairement les mêmes à tous égards que celles présentées dans l'autres publications annuelles produites par la Section de l'énergie de Statistique Canada. Ces dernières publications paraissent ordinairement après le numéro du quatrième trimestre de la présente publication.

This publication was prepared under the direction of:

- **Harold Nightingale**, Director, Manufacturing and Primary Industries Division
- **Ian Cavanagh**, Chief, Energy Section
- **Don Wilson**, Head, Analysis and coordination
- **Lise Perreault**, Automation

EXPLANATORY NOTES

The demand data contained in this publication are derived primarily from quarterly surveys of the energy supply industries. These surveys are structured towards obtaining consumption data in a standardized format, that is one which allows inter-energy comparisons. The validity of the published data is a function of the ability of the responding supply industries to code customers in an accurate manner. However, many reporting companies, especially in the petroleum products area, have difficulty in determining the final consumer of the product, due to the presence of marketing agents, brokers, etc. Further, the final consumer may use his purchased product in a number of different industries. Additionally some responding companies are not able to distinguish between certain of the disposition categories - for example between "public administration" and "other commercial/institutional". Finally, "producer consumption" for electric power includes not only "utility use", "transmission losses", etc., but also the category "unaccounted for" which is subject to variation because of cyclical billing.

The universes for all surveys forming the basis of this publication are characterized by very few but very large respondents - Hydro-Quebec, Imperial Oil Ltd., etc. Consequently, in general no "sample" surveys are employed; rather surveys of the total universe form the basis of this present publication. Those few areas where estimates have played a role are indicated in the section on Data Sources following.

Note should be made of the fact that data are published in metric units only.

kilo = 10^3
mega = 10^6
giga = 10^9
tera = 10^{12}
peta = 10^{15}
1 megalitre = 10^3m^3 (or 1 000 cubic metres)
1 gigalitre = 10^6m^3 (or 1 000 000 cubic metres)
1 B.t.u. = $1.054\ 615 \times 10^3$ joules

NOTES EXPLICATIVES

Les données sur l'écoulement d'énergie contenues dans cette publication sont tirées d'enquêtes trimestrielles auprès des fournisseurs d'énergie. Ces enquêtes sont réalisées afin d'obtenir des données sur la consommation sous forme normalisée, c.-à-d., permettant la comparaison entre les formes d'énergie. La validité des données publiées est donc fonction de la capacité de ces fournisseurs à codifier leurs clients d'une manière précise. Cependant, plusieurs répondants, particulièrement dans le secteur des produits pétroliers, ont de la difficulté à identifier les consommateurs finals, étant donné que les ventes sont souvent faites par des revendeurs, agents, etc., et il arrive souvent que le consommateur final utilise le produit acheté dans plusieurs industries. En plus, certaines compagnies répondantes ne peuvent distinguer entre certaines catégories - par exemple les catégories "administration publique" et "commerces et institutions". En dernier lieu, "autoconsommation des producteurs" dans le secteur de l'énergie électrique comprend non seulement "l'utilisation des services" ainsi que "les pertes du transport" de la-dite énergie mais aussi la catégorie des quantités "non comptabilisées" laquelle est sujette à varier dû à une rectification périodique des comptes.

L'univers de toutes les enquêtes de base pour cette publication se caractérise par le nombre restreint d'enquêtés mais qui ont une influence marquée - Hydro-Québec, Imperial Oil Ltd., etc. Aussi, plutôt que de procéder par sondage, on recense généralement l'univers total et les données complètes ainsi recueillies forment l'essentiel de cette publication. Les quelques secteurs où l'on procède à des estimations sont identifiés à la section suivante sur les sources des données.

À noter que les données sont publiées en unités métriques seulement.

kilo = 10^3
mega = 10^6
giga = 10^9
tera = 10^{12}
peta = 10^{15}
1 mégalitre = 10^3m^3 (ou 1 000 mètres cubes)
1 gigalitre = 10^6m^3 (ou 1 000 000 mètres cubes)
1 B.t.u. = $1.054\ 615 \times 10^3$ joules

1 barrel = .158 91 metres
 1 gallon = 4.546 09 litres
 1 cubic foot = .028 327 84 cubic metres
 1 ton = .907 184 7 metric tonnes.

1 baril = .158 91 mètre cube
 1 gallon = 4.546 09 litres
 1 pied cube = .028 327 84 mètre cube
 1 tonne impériale = .907 184 7 tonne métrique.

Energy conversion factors utilized based on the gross heat of combustion, are as follows:

Les facteurs de conversion en terajoules calculés selon la chaleur brute de combustion sont les suivantes:

| Fuel type | Natural unit | Conversion factor |
|---|-----------------------------------|---------------------------|
| Combustible | Unité naturelle | Coefficient de conversion |
| Coal - Charbon: | | terajoules |
| Anthracite | kilotonnes | 29.53 |
| Imported bituminous - Bitumineux importé | " | 29.99 |
| Canadian bituminous - Bitumineux canadien | " | 29.30 |
| Sub-bituminous - Sousbitumineux | " | 19.76 |
| Lignite | " | 15.35 |
| Coke | " | 28.83 |
| Coke oven gas - Gaz de four à coke | gigalitres | 18.61 |
| Propane | megalitres | 25.53 |
| Butane | " | 28.62 |
| Ethane | " | 18.36 |
| LPG's - GPL | " | 27.12(1) |
| Crude oil - Pétrole brut | " | 38.51 |
| Still gas - Gas de distillation | " | 41.73(2) |
| Motor gasoline - Essence à moteur | " | 34.66 |
| Kerosene - Kérosène | " | 37.68 |
| Diesel - Huiles diesels | " | 38.68 |
| Light fuel oil - Mazouts légers | " | 38.68 |
| Heavy fuel oil - Mazouts lourds | " | 41.73 |
| Petroleum coke - Coke de pétrole | " | 42.38 |
| Aviation gasoline - Essence d'aviation | " | 33.52 |
| Aviation turbo fuel - Carburéacteurs pour turbine à gaz | " | 35.93 |
| Natural gas - Gaz naturel | gigalitres | 38.02(3) |
| Electricity - Énergie électrique | gigawatt hours gigawatt heures | 3.60 |
| Steam - Vapeur | kilotonnes | 2.75 |
| Solid wood wastes - Déchets de bois | " | 18.00 |
| Spent pulping liquor - Lessive de pâte épuisée | " | 14.00 |

(1) Not used in calculations in this publication.

(1) Pas employé dans les calculs de cette publication.

(2) Still gas is expressed in cubic metres of heavy fuel oil equivalent.

(2) Le gaz de distillation s'exprime en équivalent de mètre cube de mazout lourd.

(3) May be revised from year to year, see note on page xv.

(3) Peut être révisé d'une année à l'autre; voir la note à la page xv.

Since this quarterly publication gives additional detail on non-energy products at petroleum refineries, it was necessary to employ the following equivalents for the products listed:

| Fuel type | Natural unit | Conversion factor |
|--|-----------------|---------------------------|
| Combustible | Unité naturelle | Coefficient de conversion |
| | | terajoules |
| Petrochemical feedstock - Alimentation pétrochimique | megalitres | 35.17 |
| Naptha specialities - Produits spéciaux/base-napthe | " | 35.17 |
| Asphalt - Asphalte | " | 44.46 |
| Lubricating oils and greases - Huiles et graisses lubrifiantes | " | 39.16 |
| Other products - Autres produits | " | 39.82 |

Puisque cette publication trimestrielle donne des renseignements supplémentaires sur des produits non énergétiques fabriqués aux raffineries de pétrole, il a fallu utiliser les équivalents suivants pour chacun de ces produits:

Notes on Individual Tables

Table S - Historical Energy Summary Table - Canada

This table is intended to allow an analysis of historical energy trends at the national level for certain points of measurement - namely:

1. Production, from primary sources.
2. Gross availability, availability of each energy form (excluding crude oil); less production of coke, production of coke oven gas, production of thermal electricity, LPG's used for the production of refinery products.
3. Net domestic consumption (net supply of primary and secondary sources, excluding crude oil).
4. Producer consumption (less any crude oil consumed by producers).
5. Non-energy use.
6. Energy use.
7. Total mining.
8. Total manufacturing.
9. Total industry.
10. Total transportation (see explanation under Table S3).
11. Residential and farm.
12. Government and other commercial.

Notes sur les tableaux

Tableau S - Tableau chronologique sommaire de l'énergie - Canada

Dans ce tableau, il est possible d'analyser chronologiquement les tendances énergétiques à l'échelle nationale pour certains points de repère, à savoir:

1. Production, sources primaires.
2. Disponibilité brute, disponibilité de chaque forme d'énergie (sauf pétrole brut); moins la production de coke, la production de gaz de fours à coke, la production d'énergie électrique (thermique), GPL utilisés pour la production de produits pétroliers raffinés.
3. Consommation intérieure nette (disponibilité nette primaire et secondaire, excluant pétrole brut).
4. Autoconsommation (moins la quantité de pétrole brut utilisé par les producteurs).
5. Utilisation non énergétique.
6. Utilisation énergétique.
7. Total, mines.
8. Total, fabrication.
9. Total, industrie.
10. Total, transports (voir l'explication au tableau S3).
11. Secteurs résidentiel et agricole.
12. Secteur public et autres secteurs commerciaux.

In years prior to 1983 nuclear and hydro energy has been converted at 10.5 megajoules per kilowatt hour for Categories 1 and 2 above, this is no longer being done.

Dans les années antérieures à 1983, on a exprimé l'hydro-électricité et l'électricité nucléaire en équivalent d'électricité thermique (à raison de 10.5 mégajoules par kilowatt-heure) pour les catégories 1 et 2 ci-dessus, ceci n'est plus fait.

For the calculation of year to year changes, data for 1982 and earlier years have been recalculated to reflect the changes in natural gas conversion rates. See note on page xv.

As an aid to analysis, degree days below 18.0° Celsius are shown. The provincial and national figures have been developed by utilizing recordings at certain selected stations considered to be representative of the geographic area concerned.

Table S1 - Energy Summary Table

This table is intended to allow an analysis of energy trends for items presented in Table S at the provincial level for the current quarter and year.

Table S2 - Components of Major Energy Totals

This table also is intended to allow an analysis of trends in energy, but in the five basic energy forms. The method of compiling the data is the same as that employed in Table S1.

Table S3 - End Uses of Major Fuel Types

This table is intended to analyse the disposition of the five basic energy forms, viz coal and coke, oil products and LPG's, natural gas, electricity, and steam. It should be emphasized that the data are not additive; for example, natural gas used to generate electricity is shown under the "natural gas" energy form, while the disposition of electric energy includes that amount of electricity produced at gas fired stations.

Furthermore, an element of "double-counting" is included in the "coal and coke" energy form in that coal used to produce coke is shown at the category "coke ovens", while the disposal of the coke produced is also accounted for in categories such as industrial use.

In the transportation sector, only the use of fuel by transportation industries (defined as railways, airlines, marine, pipelines, road and urban transit, and retail pump sales) is included. Excluded is that fuel which may have been used by other sectors (e.g., agriculture) for transportation but which is included within the quantities reported for such sectors.

Note that solid wood wastes and spent pulping liquor, shown as a Note below Table G, are not included in Summary Tables S1, S2 and S3. The amounts of these fuels used in electrical generation in the Pulp and Paper

Pour obtenir les variations annuelles, on a recalculé les données pour 1982 et les années antérieures en tenant compte des nouveaux taux de conversion du gaz naturel. Voir la note à la page xv.

Pour faciliter l'analyse, on indique les jours-degrés au-dessous de 18.0° Celsius. Les chiffres pour le Canada et les provinces ont été calculés à partir des lectures prises à certaines stations considérées comme représentatives de la région géographique en question.

Tableau S1 - Tableau sommaire de l'énergie

Ce tableau entend permettre l'analyse des tendances énergétiques pour les postes du tableau S à l'échelle provinciale pour le trimestre et l'année courante.

Tableau S2 - Répartition de l'énergie

Ce tableau entend également permettre l'analyse des tendances d'énergie mais pour les cinq principales formes d'énergie. La méthode utilisée pour la compilation des chiffres est celle indiquée dans le tableau S1.

Tableau S3 - Utilisation finale de chaque combustible principal

Ce tableau entend permettre l'analyse de l'écoulement des cinq formes primaires d'énergie, le charbon et le coke, les produits pétroliers et GPL, le gaz naturel, l'électricité et la vapeur. Veuillez prendre note que les chiffres ne peuvent pas être comptabilisés; exemple le gaz naturel utilisé dans la production de l'électricité apparaît dans la forme d'énergie "gaz naturel" bien que la distribution de l'électricité inclus ce montant d'électricité produite par les centrales alimentées au gaz.

De plus une certaine duplication existe dans la forme d'énergie "charbon et coke" en ce sens que le charbon utilisé dans la fabrication du coke apparaît dans la section "four à coke" bien que la distribution du coke fabriqué apparaît aussi dans certaines catégories comme l'usage industriel.

Dans le secteur du transport, on a inclu seulement les combustibles utilisés par l'industrie défini comme chemins de fer, lignes aériennes, maritimes, pipelines, transport commercial et en commun, et ventes au détail (pompes). Ainsi on a exclu le combustible qui a peut-être été utilisé aux fins de transport dans d'autres secteurs (exemple l'agriculture), mais qui a été inclu avec les quantités indiquées pour de tels secteurs.

À noter que les déchets solides de bois et la lessive de pâte épuisée indiqués comme nota au bas du tableau G ne sont pas compris aux tableaux sommaires S1, S2 et S3. Les quantités de ces combustibles utilisés dans la production d'énergie

Industry, as shown in Table G, are also not included in the Summary Tables. However, the electricity produced from these sources forms part of the energy form "electricity" shown in these summary tables.

Tables A and B - Primary and Secondary Energy

These tables summarize data on primary and secondary energy forms. Energy products with both primary and secondary sources (liquefied petroleum gases, electricity and steam) have all their disposition accounted for under the primary form of each.

Coal. Data presented here are the summation of data presented in Table F.

Natural gas. See the following note on Natural Gas. Since in this publication "marketable gas", not the production of raw gas, is the first measuring point, there is no producer consumption shown, although obviously the producing industry does consume a substantial quantity of gas in its operations.

Gas plant of NGL's. Includes propane, butane and ethane, see Table 14 for the component breakdown. The supply shown here measures only production from gas plants and does not include petroleum refinery produced LPG'S. Condensate is included with crude oil.

Hydro and nuclear electricity. Production is for all hydro and nuclear generated electricity. Since it is assumed that most exports and imports of electric energy are from primary sources (i.e., hydro and nuclear), and because of the difficulties involved in determining which exports/imports are derived from, e.g., coal, all exports and imports are indicated as being from primary sources.

Steam. See the following note on Steam.

Coke oven gas. See note on Coke Oven Gas.

Refined petroleum products. Data presented are the summation of data given in Tables C and D, including data on non-energy products.

Thermal electricity. Data presented here are the summation of data given in Table G. Exports, imports, producer consumption (which includes line losses etc.) are included under hydro and nuclear electricity.

électrique dans l'industrie des pâtes et papiers telles qu'indiquées au tableau G, ne sont pas comprises non plus dans les tableaux sommaires. Cependant, l'électricité produite à partir de ces sources est incluse dans la catégorie "électricité" indiquée dans les tableaux sommaires.

Tableaux A et B - Énergie primaire et secondaire

Ces tableaux résument les données sur les formes d'énergie primaire et secondaire. Les produits énergétiques consommés provenant de sources primaires et secondaires (gaz de pétrole liquéfié, électricité et vapeur) figurant intégralement comme forme primaire de chacune.

Charbon. Les données présentées sont le résultat de la sommation des données du tableau F.

Gaz naturel. Voir la note qui suit à ce sujet. Étant donné que dans la présente publication, c'est "le gaz marchand", et non la production de gaz brut, qui est le premier instrument de mesure, on n'indique pas l'autoconsommation, même si l'industrie productrice consomme évidemment une quantité considérable de gaz dans le cours de ses activités.

Usine de traitement des liquides de gaz naturel. Comprend le propane, le butane et l'éthane. Leur répartition figure au tableau 14. Les quantités disponibles indiquées ne représentent que la production des usines de traitement du gaz et n'englobent donc pas les gaz de pétrole liquéfiés produits par les raffineries de pétrole. Le condensat est inclus avec le pétrole brut.

Hydro-électricité et électricité nucléaire. La production représente la totalité de l'électricité produite sous ces deux formes. On présume que la majorité des importations et des exportations d'énergie électrique proviennent de sources primaires (e.g., hydro et nucléaire), et, parce que les difficultés encourues pour déterminer la part des importations et des exportations d'électricité dérivée d'autres sources (e.g., le charbon) sont énormes, on classifie toutes les importations et les exportations d'électricité comme étant de sources primaires.

Vapeur. Voir la note qui suit à ce sujet.

Gaz de fours à coke. Voir la note à ce sujet.

Produits pétroliers raffinés. Les données présentées sont le résultat de la sommation des données des tableaux C et D, y compris les données sur les produits non énergétiques.

Électricité thermique. Les données présentées sont le résultat de la sommation des données du tableau G. Les exportations, les importations, l'autoconsommation (qui comprend les pertes de transport, etc.) figurent sous les rubriques de l'hydro-électricité et de l'électricité nucléaire.

Tables C and D - Refined Petroleum Products

Although all of the supply data used in these tables, and in Table E, are based on data which are published in **Refined Petroleum Products (RPP)**, Catalogue 45-004, the availability figure published does not agree with the net sales figure published in the RPP. For details on the manner in which a reconciliation can be made for the years prior to 1982 please refer to previous issues.

Effective from the first quarter of 1982, the line "other adjustments" was added. The composition of this line in relation to the RPP is as follows:

- + receipts from reporting companies
- + receipts from non-reporting companies
- deliveries to reporting companies
- losses and adjustments
- transfers to feedstock(1)
- = other adjustments (as used in this publication)

The result of this change in presentation has been that the **statistical difference** in most instances has been reduced and that **availability less producers consumption** will now agree with **net sales** as presented in the RPP publication with the following exceptions:

- interprovincial transfers may be modified to reflect movements which are indicated by supplementary data used in the completion of the demand section of the tables.
- stock changes for diesel, light fuel oil and heavy fuel oil may include changes in inventory held by certain electric utility stations. Prior to 1982, only heavy fuel inventories were adjusted.

(1) A comparison of refinery inputs (line 12, tables A & B) against production of refinery petroleum products (line 1) presents an inflated volumetric gain in the refinery process. This inflated gain results from the partially refined products used as input in the refinery process that are shown in line 7 of the tables, rather than in line 12. That is - refinery inputs are understated by the amount of this transfer to refinery feedstock.

Tableaux C et D - Produits pétroliers raffinés

Même si toutes les données sur la disponibilité totale d'énergie présentées dans ces tableaux et dans le tableau E se fondent sur des chiffres publiés dans **Produits pétroliers raffinés (PPR)** (n° 45-004 au catalogue), les données publiées sur la disponibilité ne concordent pas avec le total des ventes nettes figurant dans PPR. Pour les détails sur la façon dont une reconciliation peut être faite pour les années antérieures à 1982, veuillez consulter les publications précédentes.

À partir du premier trimestre de 1982 la ligne "autres ajustements" a été ajoutée. La composition de cette nouvelle rubrique, pour ce qui est des PPR:

- + arrivages des sociétés déclarantes
- + arrivages des sociétés non déclarantes
- livraisons aux sociétés déclarantes
- pertes et ajustements
- retours pour alimentation(1)
- = autres ajustements (au sens que lui donne cette publication).

Par suite de ce changement de présentation, la **différence statistique** fut plus faible dans la plupart des cas et la **disponibilité**, moins l'**autoconsommation**, correspondra dorénavant aux **ventes nettes** telles que présentées dans la publication sur les PPR, sauf dans les cas suivants:

- les transferts inter-provinces seront modifiés le cas échéant pour refléter les mouvements qui ressortent des données supplémentaires utilisées pour compléter la partie des tableaux ayant trait à l'écoulement.
- les variations des stocks de carburant diesel, de mazout léger et de mazout lourd pourront comprendre les variations des stocks détenus par certaines centrales électriques. Avant 1982, seuls les stocks de mazout lourd étaient rectifiés.

(1) Le gain volumétrique que l'on peut dériver dans les tableaux A et B de la comparaison entre les intrants des raffineries (ligne 12) et la production de produits pétroliers raffinés (ligne 1), est supérieur au gain réel enregistré. Ceci résulte du fait que des produits pétroliers partiellement raffinés sont utilisés comme intrants dans les raffineries et que ces quantités sont indiquées à la ligne 7 plutôt qu'à la ligne 12. Conséquemment, les intrants des raffineries sont sous-estimés par les montants des retours comme charges à l'alimentation des raffineries.

- additional imports not included in the RPP may be included.
- timing of data selection can affect the calculation of supply data. That is, the inclusion or exclusion of RPP revisions may cause different results.

Because of confidentiality and because of the way in which certain fuels are used, a specific publication pattern has been employed in the body of this report. This pattern is detailed in the following text table.

The summation of these tables appears as Column 10 of Tables A and B, which obviously therefore exclude "refinery loss" data reported in **Refined Petroleum Products**.

Table E - Non-energy Refined Petroleum Products

This table provides detailed information for the data found in Tables C and D, Column 11.

Table F - Coal Details

This table provides detailed information for the data found in Tables A and B, Column 1.

Table G - Electricity Generated from Fossil Fuel

This table, based on supplementary information, provides the basis for the thermal electricity shown in Column 11 of Tables A and B.

Other manufacturing. In some instances the classification "other manufacturing" is used when no breakdown of the component industries of the manufacturing sector is provided. This is done to maintain the ability to summate the tables.

Producer consumption. Producer consumption as measured here is the consumption by the producing industry of its own produced fuel - for example refined petroleum products consumed by the refining industry. It does not include consumption of energy forms produced by other energy supply industries - for example, it would exclude the use of natural gas by the refining industry. In the case of electricity it includes transmission losses, adjustments, etc.

- des importations additionnelles, non montrées dans la publication sur les RPP, peuvent être incluses.
- le moment de la sélection des données influera parfois sur le calcul des données sur la disponibilité. Autrement dit, les résultats pourront varier selon que l'on aura ou non pris en compte les révisions pour le PPR.

À cause de la confidentialité et aussi à cause de la façon dont certains combustibles sont utilisés, on a employé un schéma spécifique pour la publication des chiffres dans ce bulletin. Ce schéma est indiqué dans le tableau explicatif suivant.

La sommation de ces tableaux donne la colonne 10 des tableaux A et B qui, évidemment, va exclure les données sur les "pertes des raffineries" déjà indiquées dans **Produits pétroliers raffinés**.

Tableau E - Produits pétroliers raffinés non énergétiques

Ce tableau fournit des renseignements détaillés au sujet des données figurant dans la colonne 11 des tableaux C et D.

Tableau F - Renseignements détaillés sur le charbon

Ce tableau fournit des renseignements détaillés au sujet des données figurant dans la colonne 1 des tableaux A et B.

Tableau G - Électricité produite à partir de combustibles fossiles

Ce tableau, qui utilise des renseignements complémentaires, sert de base aux données sur l'électricité thermique qui figurent dans la colonne 11 des tableaux A et B.

Autre fabrication. Dans certains cas, on utilise la classification "autre fabrication" lorsque la répartition des industries composantes du secteur manufacturier n'est pas disponible. Cette mesure vise à conserver la possibilité d'effectuer la sommation des tableaux.

Autoconsommation. Il s'agit ici de l'autoconsommation du pétrole produit par l'industrie - par exemple, les produits pétroliers raffinés consommés par l'industrie du raffinage du pétrole. Elle ne comprend pas la consommation de formes d'énergie produites par d'autres industries du secteur énergétique; ainsi, elle ne tient pas compte du gaz naturel consommé par l'industrie du raffinage du pétrole. Dans le cas de l'électricité, elle comprend les pertes de transport, les rectifications, etc.

TEXT TABLE I. How Industry Usage Data are Combined

TABLEAU EXPLICATIF I. Comment sont combinées les données sur l'utilisation des produits dans les différentes branches d'activité

| | | Motor gasoline | Kerosene and stove oil | Diesel fuel oil | Light fuel oil | Heavy fuel oil | Aviation gasoline | Aviation turbo fuel | Lubricating oils and greases |
|--|-----------|---------------------|------------------------------|---------------------|-------------------|-------------------|-----------------------|---------------------------|---------------------------------------|
| | | Essence à moteur | Mazout pour poêles | Carburant diesel | Mazouts légers | Mazouts lourds | Essence d'aviation | Carbu- réacteur | Huiles et graisses lubrifiantes |
| | line | | | | | | | | |

Pub. = Published - Publier.

Numbers indicate with which line in the product column the industry is combined.

Les numéros dans les colonnes des produits renvoient aux lignes correspondant aux branches d'activité.

(1) Component of total industrial.

(1) Une composante de l'ensemble des branches d'activité (total industriel).

(2) Effective 1983; formerly combined in line 28, now split between lines 20 and 28.

(2) À partir de 1983; correspondait auparavant à la ligne 28, se divise maintenant entre la ligne 20 et la ligne 28.

(3) Effective 1983; formerly combined in line 20, now split between lines 20 and 28.

(3) À partir de 1983; correspondait auparavant à la ligne 20, se divise maintenant entre la ligne 20 et la ligne 28.

(4) Effective 1983; formerly combined in line 26, now split between lines 26 and 28.

(4) À partir de 1983; correspondait auparavant à la ligne 26, se divise maintenant entre la ligne 26 et la ligne 28.

(5) Was published in 1982, due to space limitations is not now published, although components are. Thus data point can be obtained by adding lines 19, 27, 28 and 29.

(5) Était publié en 1982, n'est pas publié maintenant faute d'espace, mais les composantes le sont. On peut obtenir une donnée simple en additionnant les lignes 19, 27, 28 et 29.

(6) Effective 1983; formerly combined in line 43, now split between lines 42 and 43.

(6) À partir de 1983; correspondait auparavant à la ligne 43, se divise maintenant entre la ligne 42 et la ligne 43.

(7) Effective 1983; formerly combined in line 45, now split between lines 42, 44 and 45.

(7) À partir de 1983; correspondait auparavant à la ligne 45, se divise maintenant entre la ligne 42, 44 et la ligne 45.

Data Sources

The data sources for this publication are mainly monthly surveys of the major energy suppliers. Certain salient points are worthy of note.

Gas Plant NGL's

Gas plant propane and butane supply is based on information derived from data collected by the National Energy Board (NEB). Starting with 1982, the data line **other adjustments** is being calculated in a similar manner to the item other adjustments shown for the RPP. Production and inventories of ethane from gas plants is obtained from data provided by the Alberta Energy Resources Conservation Board (AERCB). Starting with the fourth quarter of 1983, ethane usage has been estimated based on known supply and export data.

Natural Gas

In this publication natural gas "production" is, in effect, receipts of gas by the gas pipeline industry or marketable natural gas, i.e., natural gas available after processing/reprocessing stage. This concept is different from that used in Catalogue 57-207 where raw natural gas production was used. This change in concept affects the lines "production" and "producers consumption". Estimates for the non-energy use of natural gas have been derived from monthly statistics on the production of anhydrous ammonia, methanol and carbon black. The estimates take into account that only certain companies producing the products listed above use natural gas as a feed stock. Gas used as fuel associated with feedstock gas is shown under "Industrial Chemicals".

Conversion factors used for natural gas are subject to fluctuations due to the varying heat content of gas produced from different fields, and the processes to which the gas is subjected before being marketed. For the period 1978 to 1982 inclusive a standard conversion factor of 37.23 terajoules for gigalitre was used for natural gas data presented in this publication. Starting with the publication of the fourth quarter of 1983, to reflect the varying nature of gas heating content, a current national average (annual) heat content value will be used. This will cause some distortion of historical trends. However, users

Sources des données

Les sources des données de la présente publication sont essentiellement des enquêtes mensuelles auprès des principaux producteurs d'énergie. Certains points saillants méritent d'être soulignés.

L.G.N. des usines de gaz

Les statistiques de disponibilité concernant le propane et le butane produits dans les usines de gaz sont basées sur des chiffres recueillis par l'Office national de l'énergie (O.N.E.). À partir de 1982, la ligne **Autres ajustements** est calculée de la même façon que le poste Autres ajustements dans les tableaux sur les PPR. Les statistiques concernant la production et les inventaires d'éthane par les usines de gaz sont tirées des chiffres recueillis par Alberta Energy Resources Conservation Board (AERCB). À partir du quatrième trimestre de 1983, on a estimé l'utilisation de l'éthane en se basant sur les données connues concernant l'approvisionnement et l'exportation.

Gaz naturel

Dans cette publication, la "production" de gaz naturel représente en fait le gaz naturel destiné à l'industrie des gazoducs, ou le gaz naturel commercialisable, c'est-à-dire le gaz naturel disponible après traitement et retransformation. Ce concept diffère de celui utilisé dans la publication n° 57-207 au catalogue, qui utilisait la production de gaz naturel brut. Ce changement de concept influe sur les lignes "production" et "autoconsommation". On a estimé l'utilisation non énergétique du gaz naturel à partir de statistiques mensuelles sur la production d'ammoniaque anhydre, de méthanol et de carbone. Ces estimations tiennent compte du fait que seules certaines des entreprises fabriquant les produits énumérés ci-dessus utilisent le gaz naturel comme charge d'alimentation. Le gaz utilisé comme combustible avec un gaz d'alimentation figure sous la rubrique "produits chimiques industriels".

Les facteurs de conversion utilisés pour le gaz naturel sont sujets à des fluctuations en raison de la variation de l'enthalpie du gaz produit dans différents secteurs et des procédés auxquels il est soumis avant d'être commercialisé. Pour la période de 1978 à 1982 inclusive, on s'est servi du facteur de conversion courant de 37.23 terajoules par gigalitre pour les données sur le gaz naturel présentées dans cette publication. À partir du quatrième trimestre de 1983, on utilisera la valeur courante nationale moyenne (annuelle) de l'enthalpie de manière à tenir compte des variations. Cette façon de procéder faussera quelque peu les tendances historiques. Toutefois, les utilisateurs

can revise these data to reflect varying heat contents by employing the following conversion factors:

| | |
|-------------|----------------------|
| 1978 - 37.9 | terajoules/gigalitre |
| 1979 - 37.9 | " " |
| 1980 - 37.9 | " " |
| 1981 - 37.7 | " " |
| 1982 - 38.1 | " " |
| 1983 - 38.0 | " " |

The 1983 factor was based on the 1983 average heat content, for Canada, reported by natural gas distributors, as published in Catalogue 55-002, **Gas Utilities**. In the future the previous years' factor will be used for the calculation of the first three quarters of any year. When the conversion factor for the year in total is determined, it will be implemented in the fourth quarter publication which will incorporate also revisions to data for the entire year. Data for the current year will be revised in the CANSIM data base for the whole year at the same time.

Non-energy sales of natural gas are shown only for provinces where the data is not confidential. Confidentiality constraints prevent other provincial figures being shown. As a result Canada totals are a sum of provincial figures published.

Coke Oven Gas

Figures for the production of coke oven gas are estimated from known coal coke production data. The thermal value of coal charged to coke ovens less the thermal value of the resultant coke production must equal the coke oven gas production, together with an allowance for heating and losses.

Steam

Steam **sold** is now included in the balance sheets. This item includes only known steam sales of large producers and therefore excludes any steam produced for own consumption. The primary production shown is that from nuclear sources with secondary production being shown under "transformed from other fuels" (Line 13). This method of treating the transformation of a primary form into a secondary form differs from that used for all other secondary forms in that the production of other secondary energy forms appears as "production" (i.e., Line 1) under the relevant columns. Additional sources of primary steam, i.e., biomass and geothermal, will be included if they become significant.

peuvent remédier à la situation en employant les facteurs de conversion suivants:

| | |
|-------------|----------------------|
| 1978 - 37.9 | terajoules/gigalitre |
| 1979 - 37.9 | " " |
| 1980 - 37.9 | " " |
| 1981 - 37.7 | " " |
| 1982 - 38.1 | " " |
| 1983 - 38.0 | " " |

Le facteur de 1983 est basé pour le Canada, sur l'enthalpie moyenne de 1983, déclarée par les distributeurs de gaz naturel, d'après la publication **Services de gaz** (n° 55-002 au catalogue). On utilisera à l'avenir le facteur des années précédentes pour calculer les données se rapportant aux trois premiers trimestres d'une année donnée. Une fois le facteur de conversion établi pour toute l'année, on l'appliquera dans la publication du quatrième trimestre, qui présentera les données révisées pour l'ensemble de l'année. On révisera en même temps les données du CANSIM pour toute l'année en cours.

Les ventes non énergétiques de gaz naturel ne sont rapportées que pour les provinces où de telles données ne sont pas confidentielles. Les règles de confidentialité ne permettent aucune divulgation des chiffres pour les autres provinces. Cela dit, le total pour le Canada est donc la somme des chiffres provinciaux publiés.

Gaz de fours à coke

Les chiffres sur la production de gaz de fours à coke sont estimés à partir des données connues sur la production de coke de houille. La valeur thermique de la houille chargée dans les fours à coke moins la valeur thermique du coke ainsi produit doit évaluer la production de gaz de fours à coke, rectifiée pour tenir compte de la chaleur et des pertes.

Vapeur

Les **ventes** de vapeur sont maintenant comprises dans les bilans. Ce poste comprend uniquement les ventes connues des grands producteurs et exclut par conséquent la vapeur produite pour consommation propre. La production primaire indiquée est celle tirée de sources nucléaires; la production secondaire figure comme un poste négatif sous la rubrique "Transformé en autres combustibles" (ligne 13). Cette façon de traiter la transformation d'une énergie primaire en une forme d'énergie secondaire diffère de celle utilisée pour toutes les autres formes secondaires du fait que la production d'autres formes d'énergie secondaire apparaît comme "production" (c.-à-d., la ligne 1) sous les colonnes appropriées. Les autres sources de vapeur primaire, biomasse et géothermique par exemple, seront incluses quand elles deviendront suffisamment importantes.

Secondary steam generation, as shown in this publication, can be the product of dedicated steam plants (in which case the fuels used are indicated) or the result of co-generation (in which case no fuels are shown) of steam and electricity. For the dedicated plants a measure of the efficiency of the transformation of fossil fuel into steam can be made, whereas for co-generation plants no such measure is possible since all fuels used are considered to have been used in the generation of electricity.

In the natural units part of Tables A and B, where no inter-energy summation is possible, the secondary production of steam is shown as a negative number on Line 13. This technique allows for no impact on the "total" columns yet it allows the "steam" column to retain its arithmetic sense. In the terajoule part of Tables A and B, however the treatment of secondary steam is different. Production of secondary steam is **not** shown in Line 13 in order to enable the proper summation of steam generation for "total primary sources" and "total primary and secondary" columns. Line 14 "net supply" shows in the steam column, a value which includes both primary and secondary steam production. This enables the summation of the various **individual** components of "total primary and secondary" on Line 14. Net supply of "total primary sources" excludes any secondary steam and gives the true value from primary sources. This approach ensures that the columns "total primary sources" and "total primary and secondary" retain their arithmetic sense.

Fuels Used in Thermal Electric Generation

Utilities

For the year 1976, coal used in thermal generation stations was reported in the "Coal Users Survey", while generation from such stations was known from annual surveys. Reasonably accurate estimates of generation from coal by quarter were derived. Similarly, gas used by electric utilities was available from the gas utilities monthly survey (unpublished data), while electric generation from gas was known on an annual basis. Again, using these two factors, reasonable quarterly estimates of electricity generation from gas were obtained. All other thermal generation was attributed to oil products.

La production secondaire de vapeur, telle qu'indiquée dans ce bulletin, peut être le produit d'usines dédiées à la production de vapeur (en tel cas, les combustibles utilisés sont indiqués), ou le résultat de coproduction d'électricité et de vapeur (en tel cas, aucun combustible est montré). Pour les usines dédiées à la vapeur, une mesure du rendement dans la transformation des combustibles en forme de vapeur peut être calculée, alors que pour les usines de coproduction, aucune mesure semblable ne peut être calculée puisqu'on considère que tout le combustible est utilisé pour la production d'électricité.

Dans la partie des tableaux A et B exprimée en unités naturelles, où il est impossible de procéder à des sommations des différentes formes d'énergie, la production secondaire de vapeur figure comme une inscription négative à la ligne 13. Les colonnes "total" ne sont pas touchées, tandis que la colonne "vapeur" conserve sa signification arithmétique. Dans la partie des tableaux A et B exprimée en terajoules, le traitement de la vapeur secondaire est toutefois différent. La production de la vapeur secondaire **ne** figure **pas** à la ligne 13 afin de permettre une sommation appropriée de la production de vapeur dans les colonnes "total des sources primaires" et "total primaire et secondaire". La ligne 14, c'est-à-dire la disponibilité nette indique dans la colonne "vapeur", un nombre qui englobe la production de la vapeur primaire et secondaire. Ceci permet la sommation des **diverses** composantes de la colonne "total primaire et secondaire" à la ligne 14. La disponibilité nette du "total des sources primaires" exclut toute vapeur secondaire et donne la valeur réelle des sources primaires. En procédant ainsi, les colonnes du "total des sources primaires" et du "total primaire et secondaire" conservent leur signification arithmétique.

Combustibles utilisés dans la production d'électricité thermique

Services publics

Pour 1976, les centrales thermiques ont déclaré leur consommation de charbon dans le cadre de l'enquête sur le charbon et leur production, en réponse à des enquêtes annuelles. À partir de ces données, on a pu dériver des estimations satisfaisantes de la production d'électricité par trimestre. De même, les déclarations mensuelles des services de gaz (données inédites) ont indiqué la consommation de gaz des services de distribution d'électricité alors que les données annuelles ont permis de connaître la production d'électricité des centrales à gaz. Ici encore, à partir de ces deux facteurs, on a pu obtenir des estimations trimestrielles satisfaisantes de la production d'électricité par le gaz. Le reste de la production a été attribué aux produits pétroliers.

In 1977 and subsequent years, the usage of oil, gas and coal for thermal generation obtained from the utilities is used for estimates of generation by quarter and by fuel type. Estimates for non-reporting companies are also now included.

Industrial Generation

In 1977, estimates of fuel used were based on annual survey results, with fuels allocated quarterly in accordance to the quarterly pattern of net generation by company. Within these estimates, conventional steam generation by industry is assumed to have an efficiency of 65%, or a heat rate of 5.537 megajoules/kilowatt hours. When figures supplied by industry approximated these values, no adjustments were made.

This approach differs from that used prior to 1976 in Catalogue 57-207, where the industrial use of energy for conventional generation was assumed to include the energy required to produce the initial steam and was not restricted to the energy required to super heat such steam for use in the turbine/generator. Such industrial co-generation is normal where steam is produced primarily for process heating applications and some electrical generation is performed as a by-product operation. (Utilities, however, are viewed as being in the business of producing electricity and all heat losses are ascribed to electrical generation yielding maximum possible efficiencies of about 35% to 40%.) For gas turbine and internal combustion generation, reported industry figures were left unadjusted.

For years subsequent to 1977, estimates of fuels used are based on company monthly net generation data. Efficiencies and fuel types are those obtained from the previous year's annual report from the company with efficiencies adjusted as necessary.

Crude Oil

For reasons of confidentiality, imports of crude oil have been excluded from the tables relating to the individual Atlantic provinces. Similarly, all subsequent data points for "crude oil", for "total primary sources" and for "total primary and secondary sources" do not reflect such imports. However, Table 2, the Atlantic provinces in total, does show imports of crude oil into the region as a whole, and as a consequence, the data contained therein are not the sum of the individual Atlantic provinces.

À partir de 1977, les données sur l'utilisation du pétrole, du gaz et du charbon obtenues auprès des services publics servent à estimer la production par trimestre et par type de combustible. Les estimations pour les compagnies non déclarantes sont maintenant comprises au même titre.

Production industrielle

Pour 1977, les estimations sur l'utilisation du combustible sont fondées sur les résultats d'enquêtes annuelles, l'utilisation étant répartie chaque trimestre en fonction de la tendance trimestrielle de la production nette de chaque entreprise. À même ces estimations, le rendement de la production industrielle de vapeur est fixé à 65% ou à un taux calorifique de 5.537 megajoule/kilowatt-heures. Lorsque les chiffres fournis par l'industrie se rapprochent de ces estimations, on ne fait aucun ajustement.

Cette méthode diffère de celle qui avait été utilisée avant 1976 dans la publication n° 57-207 au catalogue, qui supposait que l'utilisation industrielle de l'énergie pour la production courante comprenait l'énergie nécessaire pour produire la vapeur initiale en plus de celle requise pour surchauffer cette vapeur aux fins des turbines/génératrices. Ce type de coproduction industrielle est normal lorsque la vapeur sert à produire essentiellement de la chaleur industrielle, l'électricité n'étant qu'un sous-produit. (Toutefois, les services publics étant considérés avant tout comme des producteurs d'électricité, toutes les pertes de chaleur sont attribuées à la production électrique pour un rendement maximum possible d'environ 35% à 40%.) Pour la production des turbines à gaz et à combustion interne, aucun ajustement n'a été apporté aux chiffres de l'industrie.

Depuis 1977, les estimations sur l'utilisation du combustible sont fondées sur la production mensuelle nette, par entreprise. Les rendements et les types du combustible sont ceux établis par l'entreprise dans les questionnaires couvrant l'année précédente, avec certains ajustements pour les rendements, là où ils s'avéraient nécessaires.

Pétrole brut

Pour des raisons de confidentialité, les importations de pétrole brut ne figurent pas dans les différents tableaux sur chacune des provinces de l'Atlantique. De même, toutes les données simples subséquentes pour le "pétrole brut", le "total des sources primaires" et le "total, primaire et secondaire" ne tiennent pas compte de ces importations. Toutefois, les données du tableau 2 sur l'ensemble des provinces de l'Atlantique incorporent les importations de pétrole brut dans l'ensemble de la région et ne sont donc pas simplement la somme des données présentées pour les différentes provinces de l'Atlantique.

Inventory data used in the stock change shown on line 5 are based on two sources, pipeline inventories (which are source of origin data and do not indicate the province where held) and refinery inventories. The net effect of this method of calculation stocks change is to over state some provincial data and understate other provincial data. At the Canada level however these differences counter balance. Further, the line "statistical difference" is similarly influenced by this method of calculation.

Pour calculer les variations des stocks telles qu'indiquées à la ligne 5, deux sources distinctes de statistiques d'inventaires sont utilisées: les stocks des pipe-lines (basés sur la provenance des quantités expédiées sans égard à la province d'entreposage), et les stocks des raffineries. L'effet net de cette méthode de comptabilisation est de sous-estimer le niveau de variations de stocks de certaines provinces, et de sur-estimer cette même mesure dans les autres provinces. Toutefois, en agrégeant au plan canadien, ces différences se contrebalancent entre elles. En conséquence, la ligne "Différence statistiques" est aussi influencée par la dite-méthode.

Alternative Energy Forms

In the main tables of this publication alternative energy sources are not included, although it has been estimated that these sources account for more than 7% of Canada's energy requirements.(1) However in the tables, electricity produced by biomass (wood and spent pulping liquor) has been included. Also included, as a footnote following Table G in the second and fourth quarters issues, is the wood waste and spent pulping liquor used by the pulp and paper industry in the generation of process steam, steam for generating electricity as well as for other heating purposes.

Sources d'énergie alternatives

Les sources d'énergie alternatives ne sont pas incluses dans les tableaux de ce bulletin, bien qu'on estime que ces sources répondent à plus de 7% des besoins énergétiques du pays(1). Cependant, l'électricité produite par la biomasse (bois et lessive de pâte épuisée) est incluse dans les tableaux. Vous trouverez aussi, comme renseignements supplémentaires au tableau G dans les publications des deuxièmes et quatrièmes trimestres, les déchets de bois et la lessive de pâte épuisée utilisés par l'industrie de pâtes et papier afin de produire de la vapeur utilisée pour la transformation, pour la production d'électricité et pour d'autres usages à l'intérieur des usines.

Advance Information

It is possible to obtain some of the information contained in this publication some three to four weeks before it is available in printed form. There are two possibilities:

Information anticipée

Il est possible d'obtenir certaines informations contenues dans cette publication, cela quelque trois ou quatre semaines avant la copie imprimée. Il existe deux possibilités:

1. Statistics in natural units only (with no terajoule equivalents) are available on computer tape. Data relate to the quarter under review and individual preceding quarters for the year (i.e. no cumulative data). The price is \$50 and a computer tape must be provided. Please contact the Energy Section (M.A.P.I.D.), Statistics Canada, Ottawa, K1A 0T6 (telephone: 613-990-9823).

1. Les statistiques en unités naturelles seulement (sans les équivalents en térajoules) sont disponibles sur bande magnétique; les données se rapportent au trimestre en cours ainsi qu'aux trimestres précédents de l'année (c.-à-d. non cumulatif). Le coût est de \$50 et une bande magnétique doit être fournie. Prière de s'adresser à la Section de l'énergie (D.I.M.E.P.), Statistique Canada, Ottawa, K1A 0T6 (téléphone 613-990-9823).

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Energy Section,
Industry Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9823) or to the Statistics Canada reference centre in:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |
| Halifax (426-5331) | Winnipeg (949-4020) |
| Montréal (283-5725) | Regina (359-5405) |
| Ottawa (990-8116) | Edmonton (420-3027) |
| Toronto (966-6586) | Vancouver (666-3691) |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section de l'énergie,
Division de l'industrie,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9823) ou au centre de consultation de Statistique Canada à:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |
| Halifax (426-5331) | Winnipeg (949-4020) |
| Montréal (283-5725) | Regina (359-5405) |
| Ottawa (990-8116) | Edmonton (420-3027) |
| Toronto (966-6586) | Vancouver (666-3691) |

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres régionaux de consultation.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- + disposition of this secondary product is shown under the primary form thereof.

NOTE

Data for any quarter in a calendar year may be revised and included in the cumulative tables of a subsequent quarterly issue of that year. Given that further revisions to submitted data are received after the publication of the fourth quarter issue of any given year, it should be borne in mind that the statistical series shown in this publication are not necessarily the same in every detail as those shown in other annual publications produced by the Energy Section of Statistics Canada. These latter publications are usually published after the fourth quarter issue of this publication.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.
- + la disposition de ce produit secondaire est comprise dans les données relatives à la forme primaire de ce même produit.

NOTA

On peut réviser et inclure les données d'un trimestre d'une année civile dans les tableaux cumulatifs d'un numéro trimestriel ultérieur de cette même année. Comme d'autres révisions aux données soumises sont reçues après publication du numéro du quatrième trimestre d'une année donnée, il faut se rappeler que les séries statistiques figurant dans cette publication ne sont pas nécessairement les mêmes à tous égards que celles présentées dans l'autres publications annuelles produites par la Section de l'énergie de Statistique Canada. Ces dernières publications paraissent ordinairement après le numéro du quatrième trimestre de la présente publication.

This publication was prepared under the direction of:

- . **Denis Desjardins**, Director, Industry Division
- . **Ian Cavanagh**, Chief, Energy Section
- . **Don Wilson**, Head, Analysis and coordination
- . **Lise Perreault**, Automation

Note: The last three officers may be contacted for further information at (613) 990-9823

Cette publication a été rédigée sous la direction de:

- . **Denis Desjardins**, directeur, Division de l'Industrie
- . **Ian Cavanagh**, chef, Section de l'énergie
- . **Lise Perreault**, automation

Nota: Les deux dernières personnes ci-dessus peuvent être contactées pour plus de renseignements à (613) 990-9823

EXPLANATORY NOTES

The demand data contained in this publication are derived primarily from quarterly surveys of the energy supply industries. These surveys are structured towards obtaining consumption data in a standardized format, that is one which allows inter-energy comparisons. The validity of the published data is a function of the ability of the responding supply industries to code customers in an accurate manner. However, many reporting companies, especially in the petroleum products area, have difficulty in determining the final consumer of the product, due to the presence of marketing agents, brokers, etc. Further, the final consumer may use his purchased product in a number of different industries. Additionally some responding companies are not able to distinguish between certain of the disposition categories - for example between "public administration" and "other commercial/institutional". Finally, "producer consumption" for electric power includes not only "utility use", "transmission losses", etc., but also the category "unaccounted for" which is subject to variation because of cyclical billing.

The universes for all surveys forming the basis of this publication are characterized by very few but very large respondents - Hydro-Quebec, Imperial Oil Ltd., etc. Consequently, in general no "sample" surveys are employed; rather surveys of the total universe form the basis of this present publication. Those few areas where estimates have played a role are indicated in the section on Data Sources following.

Note should be made of the fact that data are published in metric units only.

kilo = 10^3
mega = 10^6
giga = 10^9
tera = 10^{12}
peta = 10^{15}

1 megalitre = 10^3m^3 (or 1 000 cubic metres)

1 gicalitre = 10^6m^3 (or 1 000 000 cubic metres)

1 B.t.u. = $1.054\ 615 \times 10^3$ joules

NOTES EXPLICATIVES

Les données sur l'écoulement d'énergie contenues dans cette publication sont tirées d'enquêtes trimestrielles auprès des fournisseurs d'énergie. Ces enquêtes sont réalisées afin d'obtenir des données sur la consommation sous forme normalisée, c.-à-d., permettant la comparaison entre les formes d'énergie. La validité des données publiées est donc fonction de la capacité de ces fournisseurs à codifier leurs clients d'une manière précise. Cependant, plusieurs répondants, particulièrement dans le secteur des produits pétroliers, ont de la difficulté à identifier les consommateurs finals, étant donné que les ventes sont souvent faites par des revendeurs, agents, etc., et il arrive souvent que le consommateur final utilise le produit acheté dans plusieurs industries. En plus, certaines compagnies répondantes ne peuvent distinguer entre certaines catégories - par exemple les catégories "administration publique" et "commerces et institutions". En dernier lieu, "autoconsommation des producteurs" dans le secteur de l'énergie électrique comprend non seulement "l'utilisation des services" ainsi que "les pertes du transport" de la-dite énergie mais aussi la catégorie des quantités "non comptabilisées" laquelle est sujette à varier dû à une rectification périodique des comptes.

L'univers de toutes les enquêtes de base pour cette publication se caractérise par le nombre restreint d'enquêtés mais qui ont une influence marquée - Hydro-Québec, Imperial Oil Ltd., etc. Aussi, plutôt que de procéder par sondage, on recense généralement l'univers total et les données complètes ainsi recueillies forment l'essentiel de cette publication. Les quelques secteurs où l'on procède à des estimations sont identifiés à la section suivante sur les sources des données.

À noter que les données sont publiées en unités métriques seulement.

kilo = 10^3
mega = 10^6
giga = 10^9
tera = 10^{12}
peta = 10^{15}

1 mégalitre = 10^3m^3 (ou 1 000 mètres cubes)

1 gicalitre = 10^6m^3 (ou 1 000 000 mètres cubes)

1 B.t.u. = $1.054\ 615 \times 10^3$ joules

1 barrel = .158 91 metres
 1 gallon = 4.546 09 litres
 1 cubic foot = .028 327 84 cubic metres
 1 ton = .907 184 7 metric tonnes.

Energy conversion factors utilized based on the gross heat of combustion, are as follows:

1 baril = .158 91 mètre cube
 1 gallon = 4.546 09 litres
 1 pied cube = .028 327 84 mètre cube
 1 tonne impériale = .907 184 7 tonne métrique.

Les facteurs de conversion en terajoules calculés selon la chaleur brute de combustion sont les suivantes:

| Fuel type | Natural unit | Conversion factor |
|---|-----------------------------------|---------------------------|
| Combustible | Unité naturelle | Coefficient de conversion |
| | | terajoules |
| Coal - Charbon: | | |
| Anthracite | kilotonnes | 29.53 |
| Imported bituminous - Bitumineux importé | " | 29.99 |
| Canadian bituminous - Bitumineux canadien | " | 29.30 |
| Sub-bituminous - Sousbitumineux | " | 19.76 |
| Lignite | " | 15.35 |
| Coke | " | 28.83 |
| Coke oven gas - Gaz de four à coke | gigalitres | 18.61 |
| Propane | megalitres | 25.53 |
| Butane | " | 28.62 |
| Ethane | " | 18.36 |
| LPG's - GPL | " | 27.12(1) |
| Crude oil - Pétrole brut | " | 38.51 |
| Still gas - Gas de distillation | " | 41.73(2) |
| Motor gasoline - Essence à moteur | " | 34.66 |
| Kerosene - Kérosène | " | 37.68 |
| Diesel - Huiles diesels | " | 38.68 |
| Light fuel oil - Mazouts légers | " | 38.68 |
| Heavy fuel oil - Mazouts lourds | " | 41.73 |
| Petroleum coke - Coke de pétrole | " | 42.38 |
| Aviation gasoline - Essence d'aviation | " | 33.52 |
| Aviation turbo fuel - Carburéacteurs pour turbine à gaz | " | 35.93 |
| Natural gas - Gaz naturel | gigalitres | 38.02(3) |
| Electricity - Énergie électrique | gigawatt hours gigawatt heures | 3.60 |
| Steam - Vapeur | kilotonnes | 2.75 |
| Solid wood wastes - Déchets de bois | " | 18.00 |
| Spent pulping liquor - Lessive de pâte épuisée | " | 14.00 |

(1) Not used in calculations in this publication.

(1) Pas employé dans les calculs de cette publication.

(2) Still gas is expressed in cubic metres of heavy fuel oil equivalent.

(2) Le gaz de distillation s'exprime en équivalent de mètre cube de mazout lourd.

(3) May be revised from year to year, see note on page xv.

(3) Peut être révisé d'une année à l'autre; voir la note à la page xv.

Since this quarterly publication gives additional detail on non-energy products at petroleum refineries, it was necessary to employ the following equivalents for the products listed:

Puisque cette publication trimestrielle donne des renseignements supplémentaires sur des produits non énergétiques fabriqués aux raffineries de pétrole, il a fallu utiliser les équivalents suivants pour chacun de ces produits:

| Fuel type | Natural unit | Conversion factor |
|--|-----------------|---------------------------|
| Combustible | Unité naturelle | Coefficient de conversion |
| | | terajoules |
| Petrochemical feedstock - Alimentation pétrochimique | megalitres | 35.17 |
| Naptha specialities - Produits spéciaux/base-napthe | " | 35.17 |
| Asphalt - Asphalte | " | 44.46 |
| Lubricating oils and greases - Huiles et graisses lubrifiantes | " | 39.16 |
| Other products - Autres produits | " | 39.82 |

Notes on Individual Tables

Table S - Historical Energy Summary Table - Canada

This table is intended to allow an analysis of historical energy trends at the national level for certain points of measurement - namely:

1. Production, from primary sources.
2. Gross availability, availability of each energy form (excluding crude oil); less production of coke, production of coke oven gas, production of thermal electricity, LPG's used for the production of refinery products.
3. Net domestic consumption (net supply of primary and secondary sources, excluding crude oil).
4. Producer consumption (less any crude oil consumed by producers).
5. Non-energy use.
6. Energy use.
7. Total mining.
8. Total manufacturing.
9. Total industry.
10. Total transportation (see explanation under Table S3).
11. Residential and farm.
12. Government and other commercial.

5 years prior to 1983 nuclear and hydro energy has been converted at 10.5 megajoules per kilowatt hour for Categories 1 and 2 above, this is no longer being done.

Notes sur les tableaux

Tableau S - Tableau chronologique sommaire de l'énergie - Canada

Dans ce tableau, il est possible d'analyser chronologiquement les tendances énergétiques à l'échelle nationale pour certains points de repère, à savoir:

1. Production, sources primaires.
2. Disponibilité brute, disponibilité de chaque forme d'énergie (sauf pétrole brut); moins la production de coke, la production de gaz de fours à coke, la production d'énergie électrique (thermique), GPL utilisés pour la production de produits pétroliers raffinés.
3. Consommation intérieure nette (disponibilité nette primaire et secondaire, excluant pétrole brut).
4. Autoconsommation (moins la quantité de pétrole brut utilisé par les producteurs).
5. Utilisation non énergétique.
6. Utilisation énergétique.
7. Total, mines.
8. Total, fabrication.
9. Total, industrie.
10. Total, transports (voir l'explication au tableau S3).
11. Secteurs résidentiel et agricole.
12. Secteur public et autres secteurs commerciaux.

Dans les années antérieures à 1983, on a exprimé l'hydro-électricité et l'électricité nucléaire en équivalent d'électricité thermique à raison de 10.5 mégajoules par kilowatt-heure pour les catégories 1 et 2 ci-dessus, ceci n'est plus fait.

For the calculation of year to year changes, data for 1982 and earlier years have been recalculated to reflect the changes in natural gas conversion rates. See note on page xv.

As an aid to analysis, degree days below 18.00 Celsius are shown. The provincial and national figures have been developed by utilizing recordings at certain selected stations considered to be representative of the geographic area concerned.

Table S1 - Energy Summary Table

This table is intended to allow an analysis of energy trends for items presented in Table S at the provincial level for the current quarter and year.

Table S2 - Components of Major Energy Totals

This table also is intended to allow an analysis of trends in energy, but in the five basic energy forms. The method of compiling the data is the same as that employed in Table S1.

Table S3 - End Uses of Major Fuel Types

This table is intended to analyse the disposition of the five basic energy forms, viz coal and coke, oil products and LPG's, natural gas, electricity, and steam. It should be emphasized that the data are not additive; for example, natural gas used to generate electricity is shown under the "natural gas" energy form, while the disposition of electric energy includes that amount of electricity produced at gas fired stations.

Furthermore, an element of "double-counting" is included in the "coal and coke" energy form in that coal used to produce coke is shown at the category "coke ovens", while the disposal of the coke produced is also accounted for in categories such as industrial use.

In the transportation sector, only the use of fuel by transportation industries (defined as railways, airlines, marine, pipelines, road and urban transit, and retail pump sales) is included. Excluded is that fuel which may have been used by other sectors (e.g., agriculture) for transportation but which is included within the quantities reported for such sectors.

Note that solid wood wastes and spent pulping liquor, shown as a Note below Table G, are not included in Summary Tables S1, S2 and S3. The amounts of these fuels used in electrical generation in the Pulp and Paper

Pour obtenir les variations annuelles, on a recalculé les données pour 1982 et les années antérieures en tenant compte des nouveaux taux de conversion du gaz naturel. Voir la note à la page xv.

Pour faciliter l'analyse, on indique les jours-degrés au-dessous de 18.00 Celsius. Les chiffres pour le Canada et les provinces ont été calculés à partir des lectures prises à certaines stations considérées comme représentatives de la région géographique en question.

Tableau S1 - Tableau sommaire de l'énergie

Ce tableau entend permettre l'analyse des tendances énergétiques pour les postes du tableau S à l'échelle provinciale pour le trimestre et l'année courante.

Tableau S2 - Répartition de l'énergie

Ce tableau entend également permettre l'analyse des tendances d'énergie mais pour les cinq principales formes d'énergie. La méthode utilisée pour la compilation des chiffres est celle indiquée dans le tableau S1.

Tableau S3 - Utilisation finale de chaque combustible principal

Ce tableau entend permettre l'analyse de l'écoulement des cinq formes primaires d'énergie, le charbon et le coke, les produits pétroliers et GPL, le gaz naturel, l'électricité et la vapeur. Veuillez prendre note que les chiffres ne peuvent pas être comptabilisés; exemple le gaz naturel utilisé dans la production de l'électricité apparaît dans la forme d'énergie "gaz naturel" bien que la distribution de l'électricité inclus ce montant d'électricité produite par les centrales alimentées au gaz.

De plus une certaine duplication existe dans la forme d'énergie "charbon et coke" en ce sens que le charbon utilisé dans la fabrication du coke apparaît dans la section "four à coke" bien que la distribution du coke fabriqué apparaît aussi dans certaines catégories comme l'usage industriel.

Dans le secteur du transport, on a inclus seulement les combustibles utilisés par l'industrie défini comme chemins de fer, lignes aériennes, maritimes, pipelines, transport commercial et en commun, et ventes au détail (pompes). Ainsi on a exclu le combustible qui a peut-être été utilisé aux fins de transport dans d'autres secteurs (exemple l'agriculture), mais qui a été inclus avec les quantités indiquées pour de tels secteurs.

À noter que les déchets solides de bois et la lessive de pâte épuisée indiqués comme nota au bas du tableau G ne sont pas compris aux tableaux sommaires S1, S2 et S3. Les quantités de ces combustibles utilisés dans la production d'énergie

Industry, as shown in Table G, are also not included in the Summary Tables. However, the electricity produced from these sources forms part of the energy form "electricity" shown in these summary tables.

Tables A and B - Primary and Secondary Energy

These tables summarize data on primary and secondary energy forms. Energy products with both primary and secondary sources (liquefied petroleum gases, electricity and steam) have all their disposition accounted for under the primary form of each.

Coal. Data presented here are the summation of data presented in Table F.

Natural gas. See the following note on Natural Gas. Since in this publication "marketable gas", not the production of raw gas, is the first measuring point, there is no producer consumption shown, although obviously the producing industry does consume a substantial quantity of gas in its operations.

Gas plant of NGL's. Includes propane, butane and ethane, see Table 14 for the component breakdown. The supply shown here measures only production from gas plants and does not include petroleum refinery produced LPG'S. Condensate is included with crude oil.

Hydro and nuclear electricity. Production is for all hydro and nuclear generated electricity. Since it is assumed that most exports and imports of electric energy are from primary sources (i.e., hydro and nuclear), and because of the difficulties involved in determining which exports/imports are derived from, e.g., coal, all exports and imports are indicated as being from primary sources.

Steam. See the following note on Steam.

Coke oven gas. See note on Coke Oven Gas.

Refined petroleum products. Data presented are the summation of data given in Tables C and D, including data on non-energy products.

Thermal electricity. Data presented here are the summation of data given in Table G. Exports, imports, producer consumption (which includes line losses etc.) are included under hydro and nuclear electricity.

électrique dans l'industrie des pâtes et papiers telles qu'indiquées au tableau G, ne sont pas comprises non plus dans les tableaux sommaires. Cependant, l'électricité produite à partir de ces sources est incluse dans la catégorie "électricité" indiquée dans les tableaux sommaires.

Tableaux A et B - Énergie primaire et secondaire

Ces tableaux résument les données sur les formes d'énergie primaire et secondaire. Les produits énergétiques consommés provenant de sources primaires et secondaires (gaz de pétrole liquéfié, électricité et vapeur) figurant intégralement comme forme primaire de chacune.

Charbon. Les données présentées sont le résultat de la sommation des données du tableau F.

Gaz naturel. Voir la note qui suit à ce sujet. Étant donné que dans la présente publication, c'est "le gaz marchand", et non la production de gaz brut, qui est le premier instrument de mesure, on n'indique pas l'autoconsommation, même si l'industrie productrice consomme évidemment une quantité considérable de gaz dans le cours de ses activités.

Usine de traitement des liquides de gaz naturel. Comprend le propane, le butane et l'éthane. Leur répartition figure au tableau 14. Les quantités disponibles indiquées ne représentent que la production des usines de traitement du gaz et n'englobent donc pas les gaz de pétrole liquéfiés produits par les raffineries de pétrole. Le condensat est inclus avec le pétrole brut.

Hydro-électricité et électricité nucléaire. La production représente la totalité de l'électricité produite sous ces deux formes. On présume que la majorité des importations et des exportations d'énergie électrique proviennent de sources primaires (e.g., hydro et nucléaire), et, parce que les difficultés encourues pour déterminer la part des importations et des exportations d'électricité dérivée d'autres sources (e.g., le charbon) sont énormes, on classe toutes les importations et les exportations d'électricité comme étant de sources primaires.

Vapeur. Voir la note qui suit à ce sujet.

Gaz de fours à coke. Voir la note à ce sujet.

Produits pétroliers raffinés. Les données présentées sont le résultat de la sommation des données des tableaux C et D, y compris les données sur les produits non énergétiques.

Électricité thermique. Les données présentées sont le résultat de la sommation des données du tableau G. Les exportations, les importations, l'autoconsommation (qui comprend les pertes de transport, etc.) figurent sous les rubriques de l'hydro-électricité et de l'électricité nucléaire.

Tables C and D - Refined Petroleum Products

Although all of the supply data used in these tables, and in Table E, are based on data which are published in **Refined Petroleum Products (RPP)**, Catalogue 45-004, the availability figure published does not agree with the net sales figure published in the RPP. For details on the manner in which a reconciliation can be made for the years prior to 1982 please refer to previous issues.

Effective from the first quarter of 1982, the line "other adjustments" was added. The composition of this line in relation to the RPP is as follows:

- + receipts from reporting companies
- + receipts from non-reporting companies
- deliveries to reporting companies
- losses and adjustments
- transfers to feedstock(1)
- = other adjustments (as used in this publication)

The result of this change in presentation has been that the **statistical difference** in most instances has been reduced and that **availability less producers consumption** will now agree with **net sales** as presented in the RPP publication with the following exceptions:

- interprovincial transfers may be modified to reflect movements which are indicated by supplementary data used in the completion of the demand section of the tables.
- stock changes for diesel, light fuel oil and heavy fuel oil may include changes in inventory held by certain electric utility stations. Prior to 1982, only heavy fuel inventories were adjusted.

(1) A comparison of refinery inputs (line 12, tables A & B) against production of refinery petroleum products (line 1) presents an inflated volumetric gain in the refinery process. This inflated gain results from the partially refined products used as input in the refinery process that are shown in line 7 of the tables, rather than in line 12. That is - refinery inputs are understated by the amount of this transfer to refinery feedstock.

Tableaux C et D - Produits pétroliers raffinés

Même si toutes les données sur la disponibilité totale d'énergie présentées dans ces tableaux et dans le tableau E se fondent sur des chiffres publiés dans **Produits pétroliers raffinés (PPR)** (n° 45-004 au catalogue), les données publiées sur la disponibilité ne concordent pas avec le total des ventes nettes figurant dans PPR. Pour les détails sur la façon dont une reconciliation peut être faite pour les années antérieures à 1982, veuillez consulter les publications précédentes.

À partir du premier trimestre de 1982 la ligne "autres ajustements" a été ajoutée. La composition de cette nouvelle rubrique, pour ce qui est des PPR:

- + arrivages des sociétés déclarantes
- + arrivages des sociétés non déclarantes
- livraisons aux sociétés déclarantes
- pertes et ajustements
- retours pour alimentation(1)
- = autres ajustements (au sens que lui donne cette publication).

Par suite de ce changement de présentation, la **différence statistique** fut plus faible dans la plupart des cas et la **disponibilité**, moins l'**autoconsommation**, correspondra dorénavant aux **ventes nettes** telles que présentées dans la publication sur les PPR, sauf dans les cas suivants:

- les transferts inter-provinces seront modifiés le cas échéant pour refléter les mouvements qui ressortent des données supplémentaires utilisées pour compléter la partie des tableaux ayant trait à l'écoulement.
- les variations des stocks de carburant diesel, de mazout léger et de mazout lourd pourront comprendre les variations des stocks détenus par certaines centrales électriques. Avant 1982, seuls les stocks de mazout lourd étaient rectifiés.

(1) Le gain volumétrique que l'on peut dériver dans les tableaux A et B de la comparaison entre les intrants des raffineries (ligne 12) et la production de produits pétroliers raffinés (ligne 1), est supérieur au gain réel enregistré. Ceci résulte du fait que des produits pétroliers partiellement raffinés sont utilisés comme intrants dans les raffineries et que ces quantités sont indiquées à la ligne 7 plutôt qu'à la ligne 12. Conséquemment, les intrants des raffineries sont sous-estimés par les montants des retours comme charges à l'alimentation des raffineries.

- additional imports not included in the RPP may be included.
- timing of data selection can affect the calculation of supply data. That is, the inclusion or exclusion of RPP revisions may cause different results.

Because of confidentiality and because of the way in which certain fuels are used, a specific publication pattern has been employed in the body of this report. This pattern is detailed in the following text table.

The summation of these tables appears as Column 10 of Tables A and B, which obviously therefore exclude "refinery loss" data reported in **Refined Petroleum Products**.

Table E - Non-energy Refined Petroleum Products

This table provides detailed information for the data found in Tables C and D, Column 1.

Table F - Coal Details

This table provides detailed information for the data found in Tables A and B, Column 1.

Table G - Electricity Generated from Fossil Fuel

This table, based on supplementary information, provides the basis for the thermal electricity shown in Column 11 of Tables A and B.

Other manufacturing. In some instances the classification "other manufacturing" is used when no breakdown of the component industries of the manufacturing sector is provided. This is done to maintain the ability to summate the tables.

Producer consumption. Producer consumption as measured here is the consumption by the producing industry of its own produced fuel - for example refined petroleum products consumed by the refining industry. It does not include consumption of energy forms produced by other energy supply industries - for example, it would exclude the use of natural gas by the refining industry. In the case of electricity it includes transmission losses, adjustments, etc.

- des importations additionnelles, non montrées dans la publication sur les RPP, peuvent être incluses.
- le moment de la sélection des données influera parfois sur le calcul des données sur la disponibilité. Autrement dit, les résultats pourront varier selon que l'on aura ou non pris en compte les révisions pour le PPR.

À cause de la confidentialité et aussi à cause de la façon dont certains combustibles sont utilisés, on a employé un schéma spécifique pour la publication des chiffres dans ce bulletin. Ce schéma est indiqué dans le tableau explicatif suivant.

La sommation de ces tableaux donne la colonne 10 des tableaux A et B qui, évidemment, va exclure les données sur les "pertes des raffineries" déjà indiquées dans **Produits pétroliers raffinés**.

Tableau E - Produits pétroliers raffinés non énergétiques

Ce tableau fournit des renseignements détaillés au sujet des données figurant dans la colonne 11 des tableaux C et D.

Tableau F - Renseignements détaillés sur le charbon

Ce tableau fournit des renseignements détaillés au sujet des données figurant dans la colonne 1 des tableaux A et B.

Tableau G - Électricité produite à partir de combustibles fossiles

Ce tableau, qui utilise des renseignements complémentaires, sert de base aux données sur l'électricité thermique qui figurent dans la colonne 11 des tableaux A et B.

Autre fabrication. Dans certains cas, on utilise la classification "autre fabrication" lorsque la répartition des industries composantes du secteur manufacturier n'est pas disponible. Cette mesure vise à conserver la possibilité d'effectuer la sommation des tableaux.

Autoconsommation. Il s'agit ici de l'autoconsommation du pétrole produit par l'industrie - par exemple, les produits pétroliers raffinés consommés par l'industrie du raffinage du pétrole. Elle ne comprend pas la consommation de formes d'énergie produites par d'autres industries du secteur énergétique; ainsi, elle ne tient pas compte du gaz naturel consommé par l'industrie du raffinage du pétrole. Dans le cas de l'électricité, elle comprend les pertes de transport, les rectifications, etc.

TEXT TABLE I. How Industry Usage Data are Combined

TABLEAU EXPLICATIF I. Comment sont combinées les données sur l'utilisation des produits dans les différentes branches d'activité

| | | Motor gasoline | Kerosene and stove oil | Diesel fuel oil | Light fuel oil | Heavy fuel oil | Aviation gasoline | Aviation turbo fuel | Lubricating oils and greases |
|--|-------|---------------------|------------------------------|---------------------|-------------------|-------------------|-----------------------|---------------------------|--------------------------------------|

Pub. = Published - Publier.

Numbers indicate with which line in the product column the industry is combined.

Les numéros dans les colonnes des produits renvoient aux lignes correspondant aux branches d'activité.

(1) Component of total industrial.

(1) Une composante de l'ensemble des branches d'activité (total industriel).

(2) Effective 1983; formerly combined in line 28, now split between lines 20 and 28.

(2) À partir de 1983; correspondait auparavant à la ligne 28, se divise maintenant entre la ligne 20 et la ligne 28.

(3) Effective 1983; formerly combined in line 20, now split between lines 20 and 28.

(3) À partir de 1983; correspondait auparavant à la ligne 20, se divise maintenant entre la ligne 20 et la ligne 28.

(4) Effective 1983; formerly combined in line 26, now split between lines 26 and 28.

(4) À partir de 1983; correspondait auparavant à la ligne 26, se divise maintenant entre la ligne 26 et la ligne 28.

(5) Was published in 1982, due to space limitations is not now published, although components are. Thus data point can be obtained by adding lines 19, 27, 28 and 29.

(5) Était publié en 1982, n'est pas publié maintenant faute d'espace, mais les composantes le sont. On peut obtenir une donnée simple en additionnant les lignes 19, 27, 28 et 29.

(6) Effective 1983; formerly combined in line 43, now split between lines 42 and 43.

(6) À partir de 1983; correspondait auparavant à la ligne 43, se divise maintenant entre la ligne 42 et la ligne 43.

(7) Effective 1983; formerly combined in line 45, now split between lines 42, 44 and 45.

(7) À partir de 1983; correspondait auparavant à la ligne 45, se divise maintenant entre la ligne 42, 44 et la ligne 45.

Data Sources

The data sources for this publication are mainly monthly surveys of the major energy suppliers. Certain salient points are worthy of note.

Gas Plant NGL's

Gas plant propane and butane supply is based on information derived from data collected by the National Energy Board (NEB). Starting with 1982, the data line **other adjustments** is being calculated in a similar manner to the item other adjustments shown for the RPP. Production and inventories of ethane from gas plants is obtained from data provided by the Alberta Energy Resources Conservation Board (AERCB). Starting with the fourth quarter of 1983, ethane usage has been estimated based on known supply and export data.

Natural Gas

In this publication natural gas "production" is, in effect, receipts of gas by the gas pipeline industry or marketable natural gas, i.e., natural gas available after processing/reprocessing stage. This concept is different from that used in Catalogue 57-207 where raw natural gas production was used. This change in concept affects the lines "production" and "producers consumption". Estimates for the non-energy use of natural gas have been derived from monthly statistics on the production of anhydrous ammonia, methanol and carbon black. The estimates take into account that only certain companies producing the products listed above use natural gas as a feed stock. Gas used as fuel associated with feedstock gas is shown under "Industrial Chemicals".

Conversion factors used for natural gas are subject to fluctuations due to the varying heat content of gas produced from different fields, and the processes to which the gas is subjected before being marketed. For the period 1978 to 1982 inclusive a standard conversion factor of 37.23 terajoules for gigalitre was used for natural gas data presented in this publication. Starting with the publication of the fourth quarter of 1983, to reflect the varying nature of gas heating content, a current national average (annual) heat content value will be used. This will cause some distortion of historical trends. However, users

Sources des données

Les sources des données de la présente publication sont essentiellement des enquêtes mensuelles auprès des principaux producteurs d'énergie. Certains points saillants méritent d'être soulignés.

L.G.N. des usines de gaz

Les statistiques de disponibilité concernant le propane et le butane produits dans les usines de gaz sont basées sur des chiffres recueillis par l'Office national de l'énergie (O.N.E.). À partir de 1982, la ligne **Autres ajustements** est calculée de la même façon que le poste Autres ajustements dans les tableaux sur les PPR. Les statistiques concernant la production et les inventaires d'éthane par les usines de gaz sont tirées des chiffres recueillis par Alberta Energy Resources Conservation Board (AERCB). À partir du quatrième trimestre de 1983, on a estimé l'utilisation de l'éthane en se basant sur les données connues concernant l'approvisionnement et l'exportation.

Gaz naturel

Dans cette publication, la "production" de gaz naturel représente en fait le gaz naturel destiné à l'industrie des gazoducs, ou le gaz naturel commercialisable, c'est-à-dire le gaz naturel disponible après traitement et retransformation. Ce concept diffère de celui utilisé dans la publication n° 57-207 au catalogue, qui utilisait la production de gaz naturel brut. Ce changement de concept influe sur les lignes "production" et "autoconsommation". On a estimé l'utilisation non énergétique du gaz naturel à partir de statistiques mensuelles sur la production d'ammoniaque anhydre, de méthanol et de carbone. Ces estimations tiennent compte du fait que seules certaines des entreprises fabriquant les produits énumérés ci-dessus utilisent le gaz naturel comme charge d'alimentation. Le gaz utilisé comme combustible avec un gaz d'alimentation figure sous la rubrique "produits chimiques industriels".

Les facteurs de conversion utilisés pour le gaz naturel sont sujets à des fluctuations en raison de la variation de l'enthalpie du gaz produit dans différents secteurs et des procédés auxquels il est soumis avant d'être commercialisé. Pour la période de 1978 à 1982 inclusive, on s'est servi du facteur de conversion courant de 37.23 terajoules par gigalitre pour les données sur le gaz naturel présentées dans cette publication. À partir du quatrième trimestre de 1983, on utilisera la valeur courante nationale moyenne (annuelle) de l'enthalpie de manière à tenir compte des variations. Cette façon de procéder faussera quelque peu les tendances historiques. Toutefois, les utilisateurs

can revise these data to reflect varying heat contents by employing the following conversion factors:

| | |
|-------------|----------------------|
| 1978 - 37.9 | terajoules/gigalitre |
| 1979 - 37.9 | " " |
| 1980 - 37.9 | " " |
| 1981 - 37.7 | " " |
| 1982 - 38.1 | " " |
| 1983 - 38.0 | " " |

The 1983 factor was based on the 1983 average heat content, for Canada, reported by natural gas distributors, as published in Catalogue 55-002, **Gas Utilities**. In the future the previous years' factor will be used for the calculation of the first three quarters of any year. When the conversion factor for the year in total is determined, it will be implemented in the fourth quarter publication which will incorporate also revisions to data for the entire year. Data for the current year will be revised in the CANSIM data base for the whole year at the same time.

Non-energy sales of natural gas are shown only for provinces where the data is not confidential. Confidentiality constraints prevent other provincial figures being shown. As a result Canada totals are a sum of provincial figures published.

Coke Oven Gas

Figures for the production of coke oven gas are estimated from known coal coke production data. The thermal value of coal charged to coke ovens less the thermal value of the resultant coke production must equal the coke oven gas production, together with an allowance for heating and losses.

Steam

Steam **sold** is now included in the balance sheets. This item includes only known steam sales of large producers and therefore excludes any steam produced for own consumption. The primary production shown is that from nuclear sources with secondary production being shown under "transformed from other fuels" (Line 13). This method of treating the transformation of a primary form into a secondary form differs from that used for all other secondary forms in that the production of other secondary energy forms appears as "production" (i.e., Line 1) under the relevant columns. Additional sources of primary steam, i.e., biomass and geothermal, will be included if they become significant.

peuvent remédier à la situation en employant les facteurs de conversion suivants:

| | |
|-------------|----------------------|
| 1978 - 37.9 | terajoules/gigalitre |
| 1979 - 37.9 | " " |
| 1980 - 37.9 | " " |
| 1981 - 37.7 | " " |
| 1982 - 38.1 | " " |
| 1983 - 38.0 | " " |

Le facteur de 1983 est basé pour le Canada, sur l'enthalpie moyenne de 1983, déclarée par les distributeurs de gaz naturel, d'après la publication **Services de gaz** (n° 55-002 au catalogue). On utilisera à l'avenir le facteur des années précédentes pour calculer les données se rapportant aux trois premiers trimestres d'une année donnée. Une fois le facteur de conversion établi pour toute l'année, on l'appliquera dans la publication du quatrième trimestre, qui présentera les données révisées pour l'ensemble de l'année. On révisera en même temps les données du CANSIM pour toute l'année en cours.

Les ventes non énergétiques de gaz naturel ne sont rapportées que pour les provinces où de telles données ne sont pas confidentielles. Les règles de confidentialité ne permettent aucune divulgation des chiffres pour les autres provinces. Cela dit, le total pour le Canada est donc la somme des chiffres provinciaux publiés.

Gaz de fours à coke

Les chiffres sur la production de gaz de fours à coke sont estimés à partir des données connues sur la production de coke de houille. La valeur thermique de la houille chargée dans les fours à coke moins la valeur thermique du coke ainsi produit doit égaler la production de gaz de fours à coke, rectifiée pour tenir compte de la chaleur et des pertes.

Vapeur

Les **ventes** de vapeur sont maintenant comprises dans les bilans. Ce poste comprend uniquement les ventes connues des grands producteurs et exclut par conséquent la vapeur produite pour consommation propre. La production primaire indiquée est celle tirée de sources nucléaires; la production secondaire figure comme un poste négatif sous la rubrique "Transformé en autres combustibles" (ligne 13). Cette façon de traiter la transformation d'une énergie primaire en une forme d'énergie secondaire diffère de celle utilisée pour toutes les autres formes secondaires du fait que la production d'autres formes d'énergie secondaire apparaît comme "production" (c.-à-d., ligne 1) sous les colonnes appropriées. Les autres sources de vapeur primaire, biomasse et géothermique par exemple, seront incluses quand elles deviendront suffisamment importantes.

Secondary steam generation, as shown in this publication, can be the product of dedicated steam plants (in which case the fuels used are indicated) or the result of co-generation (in which case no fuels are shown) of steam and electricity. For the dedicated plants a measure of the efficiency of the transformation of fossil fuel into steam can be made, whereas for co-generation plants no such measure is possible since all fuels used are considered to have been used in the generation of electricity.

In the natural units part of Tables A and B, where no inter-energy summation is possible, the secondary production of steam is shown as a negative number on line 13. This technique allows for no impact on the "total" columns yet it allows the "steam" column to retain its arithmetic sense. In the terajoule part of Tables A and B, however the treatment of secondary steam is different. Production of secondary steam is not shown in line 13 in order to enable the proper summation of steam generation for "total primary sources" and "total primary and secondary" columns. Line 14 "net supply" shows in the steam column, a value which includes both primary and secondary steam production. This enables the summation of the various individual components of "total primary and secondary" on line 14. Net supply of "total primary sources" excludes any secondary steam and gives the true value from primary sources. This approach ensures that the columns "total primary sources" and "total primary and secondary" retain their arithmetic sense.

Fuels Used in Thermal Electric Generation

Utilities

For the year 1976, coal used in thermal generation stations was reported in the "Coal Users Survey", while generation from such stations was known from annual surveys. Reasonably accurate estimates of generation from coal by quarter were derived. Similarly, gas used by electric utilities was available from the gas utilities monthly survey (unpublished data), while electric generation from gas was known on an annual basis. Again, using these two factors, reasonable quarterly estimates of electricity generation from gas were obtained. All other thermal generation was attributed to oil products.

La production secondaire de vapeur, telle qu'indiquée dans ce bulletin, peut être le produit d'usines dédiées à la production de vapeur (en tel cas, les combustibles utilisés sont indiqués), ou le résultat de coproduction d'électricité et de vapeur (en tel cas, aucun combustible est montré). Pour les usines dédiées à la vapeur, une mesure du rendement dans la transformation des combustibles en forme de vapeur peut être calculée, alors que pour les usines de coproduction, aucune mesure semblable ne peut être calculée puisqu'on considère que tout le combustible est utilisé pour la production d'électricité.

Dans la partie des tableaux A et B exprimée en unités naturelles, où il est impossible de procéder à des sommations des différentes formes d'énergie, la production secondaire de vapeur figure comme une inscription négative à la ligne 13. Les colonnes "total" ne sont pas touchées, tandis que la colonne "vapeur" conserve sa signification arithmétique. Dans la partie des tableaux A et B exprimée en terajoules, le traitement de la vapeur secondaire est toutefois différent. La production de la vapeur secondaire ne figure pas à la ligne 13 afin de permettre une sommation appropriée de la production de vapeur dans les colonnes "total des sources primaires" et "total primaire et secondaire". La ligne 14, c'est-à-dire la disponibilité nette indique dans la colonne "vapeur", un nombre qui englobe la production de la vapeur primaire et secondaire. Ceci permet la sommation des diverses composantes de la colonne "total primaire et secondaire" à la ligne 14. La disponibilité nette du "total des sources primaires" exclut toute vapeur secondaire et donne la valeur réelle des sources primaires. En procédant ainsi, les colonnes du "total des sources primaires" et du "total primaire et secondaire" conservent leur signification arithmétique.

Combustibles utilisés dans la production d'électricité thermique

Services publics

Pour 1976, les centrales thermiques ont déclaré leur consommation de charbon dans le cadre de l'enquête sur le charbon et leur production, en réponse à des enquêtes annuelles. À partir de ces données, on a pu dériver des estimations satisfaisantes de la production d'électricité par trimestre. De même, les déclarations mensuelles des services de gaz (données inédites) ont indiqué la consommation de gaz des services de distribution d'électricité alors que les données annuelles ont permis de connaître la production d'électricité des centrales à gaz. Ici encore, à partir de ces deux facteurs, on a pu obtenir des estimations trimestrielles satisfaisantes de la production d'électricité par le gaz. Le reste de la production a été attribué aux produits pétroliers.

In 1977 and subsequent years, the usage of oil, gas and coal for thermal generation obtained from the utilities is used for estimates of generation by quarter and by fuel type. Estimates for non-reporting companies are also now included.

Industrial Generation

In 1977, estimates of fuel used were based on annual survey results, with fuels allocated quarterly in accordance to the quarterly pattern of net generation by company. Within these estimates, conventional steam generation by industry is assumed to have an efficiency of 65%, or a heat rate of 5.537 megajoules/kilowatt hours. When figures supplied by industry approximated these values, no adjustments were made.

This approach differs from that used prior to 1976 in Catalogue 57-207, where the industrial use of energy for conventional generation was assumed to include the energy required to produce the initial steam and was not restricted to the energy required to super heat such steam for use in the turbine/generator. Such industrial co-generation is normal where steam is produced primarily for process heating applications and some electrical generation is performed as a by-product operation. (Utilities, however, are viewed as being in the business of producing electricity and all heat losses are ascribed to electrical generation yielding maximum possible efficiencies of about 35% to 40%.) For gas turbine and internal combustion generation, reported industry figures were left unadjusted.

For years subsequent to 1977, estimates of fuels used are based on company monthly net generation data. Efficiencies and fuel types are those obtained from the previous year's annual report from the company with efficiencies adjusted as necessary.

Crude Oil

For reasons of confidentiality, imports of crude oil have been excluded from the tables relating to the individual Atlantic provinces. Similarly, all subsequent data points for "crude oil", for "total primary sources" and for "total primary and secondary sources" do not reflect such imports. However, Table 2, the Atlantic provinces in total, does show imports of crude oil into the region as a whole, and as a consequence, the data contained therein are not the sum of the individual Atlantic provinces.

À partir de 1977, les données sur l'utilisation du pétrole, du gaz et du charbon obtenues auprès des services publics servent à estimer la production par trimestre et par type de combustible. Les estimations pour les compagnies non déclarantes sont maintenant comprises au même titre.

Production industrielle

Pour 1977, les estimations sur l'utilisation du combustible sont fondées sur les résultats d'enquêtes annuelles, l'utilisation étant répartie chaque trimestre en fonction de la tendance trimestrielle de la production nette de chaque entreprise. À même ces estimations, le rendement de la production industrielle de vapeur est fixé à 65% ou à un taux calorifique de 5.537 megajoule/kilowatt-heures. Lorsque les chiffres fournis par l'industrie se rapprochent de ces estimations, on ne fait aucun ajustement.

Cette méthode diffère de celle qui avait été utilisée avant 1976 dans la publication n° 57-207 au catalogue, qui supposait que l'utilisation industrielle de l'énergie pour la production courante comprenait l'énergie nécessaire pour produire la vapeur initiale en plus de celle requise pour surchauffer cette vapeur aux fins des turbines/génératrices. Ce type de coproduction industrielle est normal lorsque la vapeur sert à produire essentiellement de la chaleur industrielle, l'électricité n'étant qu'un sous-produit. (Toutefois, les services publics étant considérés avant tout comme des producteurs d'électricité, toutes les pertes de chaleur sont attribuées à la production électrique pour un rendement maximum possible d'environ 35% à 40%.) Pour la production des turbines à gaz et à combustion interne, aucun ajustement n'a été apporté aux chiffres de l'industrie.

Depuis 1977, les estimations sur l'utilisation du combustible sont fondées sur la production mensuelle nette, par entreprise. Les rendements et les types du combustible sont ceux établis par l'entreprise dans les questionnaires couvrant l'année précédente, avec certains ajustements pour les rendements, là où ils s'avèrent nécessaires.

Pétrole brut

Pour des raisons de confidentialité, les importations de pétrole brut ne figurent pas dans les différents tableaux sur chacune des provinces de l'Atlantique. De même, toutes les données simples subséquentes pour le "pétrole brut", le "total des sources primaires" et le "total, primaire et secondaire" ne tiennent pas compte de ces importations. Toutefois, les données du tableau 2 sur l'ensemble des provinces de l'Atlantique incorporent les importations de pétrole brut dans l'ensemble de la région et ne sont donc pas simplement la somme des données présentées pour les différentes provinces de l'Atlantique.

Inventory data used in the stock change shown on Line 5 are based on two sources, pipeline inventories (which are source of origin data and do not indicate the province where held) and refinery inventories. The net effect of this method of calculation of stock change is to overstate some provincial data and understate other provincial data. At the Canada level however these differences counter balance. Further, the line "statistical difference" is similarly influenced by this method of calculation.

Alternative Energy Forms

In the main tables of this publication alternative energy sources are not included, although it has been estimated that these sources account for more than 7% of Canada's energy requirements.(1) However in the tables, electricity produced by biomass wood and spent pulping liquor has been included. Also included, as a footnote following Table G in the second and fourth quarters issues, is the wood waste and spent pulping liquor used by the pulp and paper industry in the generation of process steam, team for generating electricity as well as for other heating purposes.

Advance Information

It is possible to obtain some of the information contained in this publication some three to four weeks before it is available in printed form. There are two possibilities:

1. Statistics in natural units only (with no terajoule equivalents) are available on computer tape. Data relate to the quarter under review and individual preceding quarters for the year (i.e. no cumulative data). The price is \$50 and a computer tape must be provided. Please contact the Energy Section (M.A.P.I.D.), Statistics Canada, Ottawa, K1A 0T6 (telephone: 613-990-9823).

(1) Canada Energy Supply and Demand 1983-2005, Summary Report, page 19, National Energy Board.

Pour calculer les variations des stocks telles qu'indiquées à la ligne 5, deux sources distinctes de statistiques d'inventaires sont utilisées: les stocks des pipe-lines (basés sur la provenance des quantités expédiées sans égard à la province d'entreposage), et les stocks des raffineries. L'effet net de cette méthode de comptabilisation est de sous-estimer le niveau de variations de stocks de certaines provinces, et de sur-estimer cette même mesure dans les autres provinces. Toutefois, en agrégeant au plan canadien, ces différences se contrebalancent entre elles. En conséquence, la ligne "Différence statistiques" est aussi influencée par la dite-méthode.

Sources d'énergie alternatives

Les sources d'énergie alternatives ne sont pas incluses dans les tableaux de ce bulletin, bien qu'on estime que ces sources répondent à plus de 7% des besoins énergétiques du pays(1). Cependant, l'électricité produite par la biomasse (bois et lessive de pâte épuisée) est incluse dans les tableaux. Vous trouverez aussi, comme renseignements supplémentaires au tableau G dans les publications des deuxièmes et quatrièmes trimestres, les déchets de bois et la lessive de pâte épuisée utilisés par l'industrie de pâtes et papier afin de produire de la vapeur utilisée pour la transformation, pour la production d'électricité et pour d'autres usages à l'intérieur des usines.

Information anticipée

Il est possible d'obtenir certaines informations contenues dans cette publication, cela quelque trois ou quatre semaines avant la copie imprimée. Il existe deux possibilités:

1. Les statistiques en unités naturelles seulement (sans les équivalents en térajoules) sont disponibles sur bande magnétique; les données se rapportent au trimestre en cours ainsi qu'aux trimestres précédents de l'année (c.-à-d. non cumulatif). Le coût est de \$50 et une bande magnétique doit être fournie. Prière de s'adresser à la Section de l'énergie (D.I.M.E.P.), Statistique Canada, Ottawa, K1A 0T6 (téléphone 613-990-9823).

(1) L'Énergie au Canada, offre et demande 1983-2005, rapport sommaire, page 19, l'office national de l'énergie.

2. The Canadian Socio-Economic Information Management System (CANSIM), which is Statistics Canada's computerized data bank, contains data in terajoules from the A and C tables of this publication by quarter from 1978 to date. Refer to CANSIM matrices 7976 to 8001.

Note: Data published on an annual basis in publication **Detailed Energy Supply and Demand in Canada**, Catalogue 57-207, are available from 1958 to 1977 in CANSIM matrices 7140 to 7436.

2. Le système canadien d'information socioéconomique (CANSIM), qui est la banque de données informatisées de Statistique Canada, renferme des données en térajoules tirées des tableaux A et C de la présente publication, présentées par trimestre de 1978 jusqu'à aujourd'hui. Se reporter aux matrices 7976 à 8001 du CANSIM.

Nota: Les données publiées sur une base annuelle dans la publication **Disponibilité et écoulement d'énergie au Canada**, n° 57-207 au catalogue, sont disponibles pour les années 1958 à 1977 dans les matrices 7140 à 7436 du CANSIM.

Quarterly report on energy supply-demand in Canada

1984-IV

Bulletin trimestriel- disponibilité et écoulement d'énergie au Canada

1984-IV

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Energy Section,
Industry Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9823) or to the Statistics Canada reference centre in:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |
| Halifax (426-5331) | Winnipeg (949-4020) |
| Montréal (283-5725) | Regina (359-5405) |
| Ottawa (990-8116) | Edmonton (420-3027) |
| Toronto (973-6586) | Vancouver (666-3691) |

Credit card only (973-8018)

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

1(613)990-8115

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section de l'énergie,
Division de l'industrie,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9823) ou au centre de consultation de Statistique Canada à:

| | |
|-----------------------|---------------------------|
| St. John's (772-4073) | Sturgeon Falls (753-4888) |
| Halifax (426-5331) | Winnipeg (949-4020) |
| Montréal (283-5725) | Regina (359-5405) |
| Ottawa (990-8116) | Edmonton (420-3027) |
| Toronto (973-6586) | Vancouver (666-3691) |

Carte de crédit seulement (973-8018)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres régionaux de consultation.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- + disposition of this secondary product is shown under the primary form thereof.

NOTE

Data for any quarter in a calendar year may be revised and included in the cumulative tables of a subsequent quarterly issue of that year. Given that further revisions to submitted data are received after the publication of the fourth quarter issue of any given year, it should be borne in mind that the statistical series shown in this publication are not necessarily the same in every detail as those shown in other annual publications produced by the Energy Section of Statistics Canada. These latter publications are usually published after the fourth quarter issue of this publication.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.
- + la disposition de ce produit secondaire est comprise dans les données relatives à la forme primaire de ce même produit.

NOTA

On peut réviser et inclure les données d'un trimestre d'une année civile dans les tableaux cumulatifs d'un numéro trimestriel ultérieur de cette même année. Comme d'autres révisions aux données soumises sont reçues après publication du numéro du quatrième trimestre d'une année donnée, il faut se rappeler que les séries statistiques figurant dans cette publication ne sont pas nécessairement les mêmes à tous égards que celles présentées dans l'autres publications annuelles produites par la Section de l'énergie de Statistique Canada. Ces dernières publications paraissent ordinairement après le numéro du quatrième trimestre de la présente publication.

This publication was prepared under the direction of:

- **Denis Desjardins**, Director, Industry Division
- **Ian Cavanagh**, Chief, Energy Section

Cette publication a été rédigée sous la direction de:

EXPLANATORY NOTES

The demand data contained in this publication are derived primarily from quarterly surveys of the energy supply industries. These surveys are structured towards obtaining consumption data in a standardized format, that is one which allows inter-energy comparisons. The validity of the published data is a function of the ability of the responding supply industries to code customers in an accurate manner. However, many reporting companies, especially in the petroleum products area, have difficulty in determining the final consumer of the product, due to the presence of marketing agents, brokers, etc. Further, the final consumer may use his purchased product in a number of different industries. Additionally some responding companies are not able to distinguish between certain of the disposition categories - for example between "public administration" and "other commercial/institutional". Finally, "producer consumption" for electric power includes not only "utility use", "transmission losses", etc., but also the category "unaccounted for" which is subject to variation because of cyclical billing.

The universes for all surveys forming the basis of this publication are characterized by very few but very large respondents - Hydro-Quebec, Imperial Oil Ltd., etc. Consequently, in general no "sample" surveys are employed; rather surveys of the total universe form the basis of this present publication. Those few areas where estimates have played a role are indicated in the section on Data Sources following.

Note should be made of the fact that data are published in metric units only.

kilo = 10^3
mega = 10^6
giga = 10^9
tera = 10^{12}
peta = 10^{15}
1 megalitre = 10^3m^3 (or 1 000 cubic metres)
1 gigalitre = 10^6m^3 (or 1 000 000 cubic metres)
1 B.t.u. = $1.054\ 615 \times 10^3$ joules

NOTES EXPLICATIVES

Les données sur l'écoulement d'énergie contenues dans cette publication sont tirées d'enquêtes trimestrielles auprès des fournisseurs d'énergie. Ces enquêtes sont réalisées afin d'obtenir des données sur la consommation sous forme normalisée, c.-à-d., permettant la comparaison entre les formes d'énergie. La validité des données publiées est donc fonction de la capacité de ces fournisseurs à codifier leurs clients d'une manière précise. Cependant, plusieurs répondants, particulièrement dans le secteur des produits pétroliers, ont de la difficulté à identifier les consommateurs finals, étant donné que les ventes sont souvent faites par des revendeurs, agents, etc., et il arrive souvent que le consommateur final utilise le produit acheté dans plusieurs industries. En plus, certaines compagnies répondantes ne peuvent distinguer entre certaines catégories - par exemple les catégories "administration publique" et "commerces et institutions". En dernier lieu, "autoconsommation des producteurs" dans le secteur de l'énergie électrique comprend non seulement "l'utilisation des services" ainsi que "les pertes du transport" de la-dite énergie mais aussi la catégorie des quantités "non comptabilisées" laquelle est sujette à varier dû à une rectification périodique des comptes.

L'univers de toutes les enquêtes de base pour cette publication se caractérise par le nombre restreint d'enquêtés mais qui ont une influence marquée - Hydro-Québec, Imperial Oil Ltd., etc. Aussi, plutôt que de procéder par sondage, on recense généralement l'univers total et les données complètes ainsi recueillies forment l'essentiel de cette publication. Les quelques secteurs où l'on procède à des estimations sont identifiés à la section suivante sur les sources des données.

À noter que les données sont publiées en unités métriques seulement.

kilo = 10^3
mega = 10^6
giga = 10^9
tera = 10^{12}
peta = 10^{15}
1 mégalitre = 10^3m^3 (ou 1 000 mètres cubes)
1 gigalitre = 10^6m^3 (ou 1 000 000 mètres cubes)
1 B.t.u. = $1.054\ 615 \times 10^3$ joules

1 barrel = .158 91 metres
 1 gallon = 4.546 09 litres
 1 cubic foot = .028 327 84 cubic metres
 1 ton = .907 184 7 metric tonnes.

Energy conversion factors utilized based on the gross heat of combustion, are as follows:

1 baril = .158 91 mètre cube
 1 gallon = 4.546 09 litres
 1 pied cube = .028 327 84 mètre cube
 1 tonne impériale = .907 184 7 tonne métrique.

Les facteurs de conversion en terajoules calculés selon la chaleur brute de combustion sont les suivantes:

| Fuel type | Natural unit | Conversion factor |
|---|-----------------------------------|---------------------------|
| Combustible | Unité naturelle | Coefficient de conversion |
| Coal - Charbon: | | terajoules |
| Anthracite | kilotonnes | 29.53 |
| Imported bituminous - Bitumineux importé | " | 29.99 |
| Canadian bituminous - Bitumineux canadien | " | 29.30 |
| Sub-bituminous - Sousbitumineux | " | 19.76 |
| Lignite | " | 15.35 |
| Coke | " | 28.83 |
| Coke oven gas - Gaz de four à coke | gigalitres | 18.61 |
| Propane | megalitres | 25.53 |
| Butane | " | 28.62 |
| Ethane | " | 18.36 |
| LPG's - GPL | " | 27.12(1) |
| Crude oil - Pétrole brut | " | 38.51 |
| Still gas - Gas de distillation | " | 41.73(2) |
| Motor gasoline - Essence à moteur | " | 34.66 |
| Kerosene - Kérosène | " | 37.68 |
| Diesel - Huiles diesels | " | 38.68 |
| Light fuel oil - Mazouts légers | " | 38.68 |
| Heavy fuel oil - Mazouts lourds | " | 41.73 |
| Petroleum coke - Coke de pétrole | " | 42.38 |
| Aviation gasoline - Essence d'aviation | " | 33.52 |
| Aviation turbo fuel - Carburéacteurs pour turbine à gaz | " | 35.93 |
| Natural gas - Gaz naturel | gigalitres | 37.97(3) |
| Electricity - Énergie électrique | gigawatt hours gigawatt heures | 3.60 |
| Steam - Vapeur | kilotonnes | 2.75 |
| Solid wood wastes - Déchets de bois | " | 18.00 |
| Spent pulping liquor - Lessive de pâte épuisée | " | 14.00 |

(1) Not used in calculations in this publication.

(1) Pas employé dans les calculs de cette publication.

(2) Still gas is expressed in cubic metres of heavy fuel oil equivalent.

(2) Le gaz de distillation s'exprime en équivalent de mètre cube de mazout lourd.

(3) May be revised from year to year, see note on page xv.

(3) Peut être révisé d'une année à l'autre; voir la note à la page xv.

Since this quarterly publication gives additional detail on non-energy products at petroleum refineries, it was necessary to employ the following equivalents for the products listed:

Puisque cette publication trimestrielle donne des renseignements supplémentaires sur des produits non énergétiques fabriqués aux raffineries de pétrole, il a fallu utiliser les équivalents suivants pour chacun de ces produits:

| Fuel type | Natural unit | Conversion factor |
|--|-----------------|---------------------------|
| Combustible | Unité naturelle | Coefficient de conversion |
| | | terajoules |
| Petrochemical feedstock - Alimentation pétrochimique | megalitres | 35.17 |
| Naptha specialities - Produits spéciaux/base-napthe | " | 35.17 |
| Asphalt - Asphalte | " | 44.46 |
| Lubricating oils and greases - Huiles et graisses lubrifiantes | " | 39.16 |
| Other products - Autres produits | " | 39.82 |

Notes on Individual Tables

Table S - Historical Energy Summary Table - Canada

This table is intended to allow an analysis of historical energy trends at the national level for certain points of measurement - namely:

1. Production, from primary sources.
2. Gross availability, availability of each energy form (excluding crude oil); less production of coke, production of coke oven gas, production of thermal electricity, LPG's used for the production of refinery products.
3. Net domestic consumption (net supply of primary and secondary sources, excluding crude oil).
4. Producer consumption (less any crude oil consumed by producers).
5. Non-energy use.
6. Energy use.
7. Total mining.
8. Total manufacturing.
9. Total industry.
10. Total transportation (see explanation under Table S3).
11. Residential and farm.
12. Government and other commercial.

In years prior to 1983 nuclear and hydro energy has been converted at 10.5 megajoules per kilowatt hour for Categories 1 and 2 above, this is no longer being done.

Notes sur les tableaux

Tableau S - Tableau chronologique sommaire de l'énergie - Canada

Dans ce tableau, il est possible d'analyser chronologiquement les tendances énergétiques à l'échelle nationale pour certains points de repère, à savoir:

1. Production, sources primaires.
2. Disponibilité brute, disponibilité de chaque forme d'énergie (sauf pétrole brut); moins la production de coke, la production de gaz de fours à coke, la production d'énergie électrique (thermique), GPL utilisés pour la production de produits pétroliers raffinés.
3. Consommation intérieure nette (disponibilité nette primaire et secondaire, excluant pétrole brut).
4. Autoconsommation (moins la quantité de pétrole brut utilisé par les producteurs).
5. Utilisation non énergétique.
6. Utilisation énergétique.
7. Total, mines.
8. Total, fabrication.
9. Total, industrie.
10. Total, transports (voir l'explication au tableau S3).
11. Secteurs résidentiel et agricole.
12. Secteur public et autres secteurs commerciaux.

Dans les années antérieures à 1983, on a exprimé l'hydro-électricité et l'électricité nucléaire en équivalent d'électricité thermique (à raison de 10.5 mégajoules par kilowatt-heure) pour les catégories 1 et 2 ci-dessus, ceci n'est plus fait.

For the calculation of year to year changes, data for 1982 and earlier years have been recalculated to reflect the changes in natural gas conversion rates. See note on page xv.

As an aid to analysis, degree days below 18.0° Celsius are shown. The provincial and national figures have been developed by utilizing recordings at certain selected stations considered to be representative of the geographic area concerned.

Table S1 - Energy Summary Table

This table is intended to allow an analysis of energy trends for items presented in Table S at the provincial level for the current quarter and year.

Table S2 - Components of Major Energy Totals

This table also is intended to allow an analysis of trends in energy, but in the five basic energy forms. The method of compiling the data is the same as that employed in Table S1.

Table S3 - End Uses of Major Fuel Types

This table is intended to analyse the disposition of the five basic energy forms, viz coal and coke, oil products and LPG's, natural gas, electricity, and steam. It should be emphasized that the data are not additive; for example, natural gas used to generate electricity is shown under the "natural gas" energy form, while the disposition of electric energy includes that amount of electricity produced at gas fired stations.

Furthermore, an element of "double-counting" is included in the "coal and coke" energy form in that coal used to produce coke is shown at the category "coke ovens", while the disposal of the coke produced is also accounted for in categories such as industrial use.

In the transportation sector, only the use of fuel by transportation industries (defined as railways, airlines, marine, pipelines, road and urban transit, and retail pump sales) is included. Excluded is that fuel which may have been used by other sectors (e.g., agriculture) for transportation but which is included within the quantities reported for such sectors.

Note that solid wood wastes and spent pulping liquor, shown as a Note below Table G, are not included in Summary Tables S1, S2 and S3. The amounts of these fuels used in electrical generation in the Pulp and Paper

Pour obtenir les variations annuelles, on a recalculé les données pour 1982 et les années antérieures en tenant compte des nouveaux taux de conversion du gaz naturel. Voir la note à la page xv.

Pour faciliter l'analyse, on indique les jours-degrés au-dessous de 18.0° Celsius. Les chiffres pour le Canada et les provinces ont été calculés à partir des lectures prises à certaines stations considérées comme représentatives de la région géographique en question.

Tableau S1 - Tableau sommaire de l'énergie

Ce tableau entend permettre l'analyse des tendances énergétiques pour les postes du tableau S à l'échelle provinciale pour le trimestre et l'année courante.

Tableau S2 - Répartition de l'énergie

Ce tableau entend également permettre l'analyse des tendances d'énergie mais pour les cinq principales formes d'énergie. La méthode utilisée pour la compilation des chiffres est celle indiquée dans le tableau S1.

Tableau S3 - Utilisation finale de chaque combustible principal

Ce tableau entend permettre l'analyse de l'écoulement des cinq formes primaires d'énergie, le charbon et le coke, les produits pétroliers et GPL, le gaz naturel, l'électricité et la vapeur. Veuillez prendre note que les chiffres ne peuvent pas être comptabilisés; exemple le gaz naturel utilisé dans la production de l'électricité apparaît dans la forme d'énergie "gaz naturel" bien que la distribution de l'électricité inclus ce montant d'électricité produite par les centrales alimentées au gaz.

De plus une certaine duplication existe dans la forme d'énergie "charbon et coke" en ce sens que le charbon utilisé dans la fabrication du coke apparaît dans la section "four à coke" bien que la distribution du coke fabriqué apparaît aussi dans certaines catégories comme l'usage industriel.

Dans le secteur du transport, on a inclus seulement les combustibles utilisés par l'industrie défini comme chemins de fer, lignes aériennes, maritimes, pipelines, transport commercial et en commun, et ventes au détail (pompes). Ainsi on a exclu le combustible qui a peut-être été utilisé aux fins de transport dans d'autres secteurs (exemple l'agriculture), mais qui a été inclus avec les quantités indiquées pour de tels secteurs.

À noter que les déchets solides de bois et la lessive de pâte épuisée indiqués comme nota au bas du tableau G ne sont pas compris aux tableaux sommaires S1, S2 et S3. Les quantités de ces combustibles utilisés dans la production d'énergie

Industry, as shown in Table G, are also not included in the Summary Tables. However, the electricity produced from these sources forms part of the energy form "electricity" shown in these summary tables.

Tables A and B - Primary and Secondary Energy

These tables summarize data on primary and secondary energy forms. Energy products with both primary and secondary sources (liquefied petroleum gases, electricity and steam) have all their disposition accounted for under the primary form of each.

Coal. Data presented here are the summation of data presented in Table F.

Natural gas. See the following note on Natural Gas. Since in this publication "marketable gas", not the production of raw gas, is the first measuring point, there is no producer consumption shown, although obviously the producing industry does consume a substantial quantity of gas in its operations.

Gas plant of NGL's. Includes propane, butane and ethane, see Table 14 for the component breakdown. The supply shown here measures only production from gas plants and does not include petroleum refinery produced LPG'S. Condensate is included with crude oil.

Hydro and nuclear electricity. Production is for all hydro and nuclear generated electricity. Since it is assumed that most exports and imports of electric energy are from primary sources (i.e., hydro and nuclear), and because of the difficulties involved in determining which exports/imports are derived from, e.g., coal, all exports and imports are indicated as being from primary sources.

Steam. See the following note on Steam.

Coke oven gas. See note on Coke Oven Gas.

Refined petroleum products. Data presented are the summation of data given in Tables C and D, including data on non-energy products.

Thermal electricity. Data presented here are the summation of data given in Table G. Exports, imports, producer consumption (which includes line losses etc.) are included under hydro and nuclear electricity.

électrique dans l'industrie des pâtes et papiers telles qu'indiquées au tableau G, ne sont pas comprises non plus dans les tableaux sommaires. Cependant, l'électricité produite à partir de ces sources est incluse dans la catégorie "électricité" indiquée dans les tableaux sommaires.

Tableaux A et B - Énergie primaire et secondaire

Ces tableaux résument les données sur les formes d'énergie primaire et secondaire. Les produits énergétiques consommés provenant de sources primaires et secondaires (gaz de pétrole liquéfié, électricité et vapeur) figurant intégralement comme forme primaire de chacune.

Charbon. Les données présentées sont le résultat de la sommation des données du tableau F.

Gaz naturel. Voir la note qui suit à ce sujet. Étant donné que dans la présente publication, c'est "le gaz marchand", et non la production de gaz brut, qui est le premier instrument de mesure, on n'indique pas l'autoconsommation, même si l'industrie productrice consomme évidemment une quantité considérable de gaz dans le cours de ses activités.

Usine de traitement des liquides de gaz naturel. Comprend le propane, le butane et l'éthane. Leur répartition figure au tableau 14. Les quantités disponibles indiquées ne représentent que la production des usines de traitement du gaz et n'englobent donc pas les gaz de pétrole liquéfiés produits par les raffineries de pétrole. Le condensat est inclus avec le pétrole brut.

Hydro-électricité et électricité nucléaire. La production représente la totalité de l'électricité produite sous ces deux formes. On présume que la majorité des importations et des exportations d'énergie électrique proviennent de sources primaires (e.g., hydro et nucléaire), et, parce que les difficultés encourues pour déterminer la part des importations et des exportations d'électricité dérivée d'autres sources (e.g., le charbon) sont énormes, on classifie toutes les importations et les exportations d'électricité comme étant de sources primaires.

Vapeur. Voir la note qui suit à ce sujet.

Gaz de fours à coke. Voir la note à ce sujet.

Produits pétroliers raffinés. Les données présentées sont le résultat de la sommation des données des tableaux C et D, y compris les données sur les produits non énergétiques.

Électricité thermique. Les données présentées sont le résultat de la sommation des données du tableau G. Les exportations, les importations, l'autoconsommation (qui comprend les pertes de transport, etc.) figurent sous les rubriques de l'hydro-électricité et de l'électricité nucléaire.

Tables C and D - Refined Petroleum Products

Although all of the supply data used in these tables, and in Table E, are based on data which are published in **Refined Petroleum Products (RPP)**, Catalogue 45-004, the availability figure published does not agree with the net sales figure published in the RPP. For details on the manner in which a reconciliation can be made for the years prior to 1982 please refer to previous issues.

Effective from the first quarter of 1982, the line "other adjustments" was added. The composition of this line in relation to the RPP is as follows:

- + receipts from reporting companies
- + receipts from non-reporting companies
- deliveries to reporting companies
- losses and adjustments
- transfers to feedstock(1)
- = other adjustments (as used in this publication)

The result of this change in presentation has been that the **statistical difference** in most instances has been reduced and that **availability less producers consumption** will now agree with **net sales** as presented in the RPP publication with the following exceptions:

- interprovincial transfers may be modified to reflect movements which are indicated by supplementary data used in the completion of the demand section of the tables.
- stock changes for diesel, light fuel oil and heavy fuel oil may include changes in inventory held by certain electric utility stations. Prior to 1982, only heavy fuel inventories were adjusted.

(1) A comparison of refinery inputs (line 12, tables A & B) against production of refinery petroleum products (line 1) presents an inflated volumetric gain in the refinery process. This inflated gain results from the partially refined products used as input in the refinery process that are shown in line 7 of the tables, rather than in line 12. That is - refinery inputs are understated by the amount of this transfer to refinery feedstock.

Tableaux C et D - Produits pétroliers raffinés

Même si toutes les données sur la disponibilité totale d'énergie présentées dans ces tableaux et dans le tableau E se fondent sur des chiffres publiés dans **Produits pétroliers raffinés (PPR)** (n° 45-004 au catalogue), les données publiées sur la disponibilité ne concordent pas avec le total des ventes nettes figurant dans PPR. Pour les détails sur la façon dont une reconciliation peut être faite pour les années antérieures à 1982, veuillez consulter les publications précédentes.

À partir du premier trimestre de 1982 la ligne "autres ajustements" a été ajoutée. La composition de cette nouvelle rubrique, pour ce qui est des PPR:

- + arrivages des sociétés déclarantes
- + arrivages des sociétés non déclarantes
- livraisons aux sociétés déclarantes
- pertes et ajustements
- retours pour alimentation(1)
- = autres ajustements (au sens que lui donne cette publication).

Par suite de ce changement de présentation, la **différence statistique** fut plus faible dans la plupart des cas et la **disponibilité**, moins l'**autoconsommation**, correspondra dorénavant aux **ventes nettes** telles que présentées dans la publication sur les PPR, sauf dans les cas suivants:

- les transferts inter-provinces seront modifiés le cas échéant pour refléter les mouvements qui ressortent des données supplémentaires utilisées pour compléter la partie des tableaux ayant trait à l'écoulement.
- les variations des stocks de carburant diesel, de mazout léger et de mazout lourd pourront comprendre les variations des stocks détenus par certaines centrales électriques. Avant 1982, seuls les stocks de mazout lourd étaient rectifiés.

(1) Le gain volumétrique que l'on peut dériver dans les tableaux A et B de la comparaison entre les intrants des raffineries (ligne 12) et la production de produits pétroliers raffinés (ligne 1), est supérieur au gain réel enregistré. Ceci résulte du fait que des produits pétroliers partiellement raffinés sont utilisés comme intrants dans les raffineries et que ces quantités sont indiquées à la ligne 7 plutôt qu'à la ligne 12. Conséquemment, les intrants des raffineries sont sous-estimés par les montants des retours comme charges à l'alimentation des raffineries.

- additional imports not included in the RPP may be included.
- timing of data selection can affect the calculation of supply data. That is, the inclusion or exclusion of RPP revisions may cause different results.

Because of confidentiality and because of the way in which certain fuels are used, a specific publication pattern has been employed in the body of this report. This pattern is detailed in the following text table.

The summation of these tables appears as Column 10 of Tables A and B, which obviously therefore exclude "refinery loss" data reported in **Refined Petroleum Products**.

Table E - Non-energy Refined Petroleum Products

This table provides detailed information for the data found in Tables C and D, Column 11.

Table F - Coal Details

This table provides detailed information for the data found in Tables A and B, Column 1.

Table G - Electricity Generated from Fossil Fuel

This table, based on supplementary information, provides the basis for the thermal electricity shown in Column 11 of Tables A and B.

Other manufacturing. In some instances the classification "other manufacturing" is used when no breakdown of the component industries of the manufacturing sector is provided. This is done to maintain the ability to summate the tables.

Producer consumption. Producer consumption as measured here is the consumption by the producing industry of its own produced fuel - for example refined petroleum products consumed by the refining industry. It does not include consumption of energy forms produced by other energy supply industries - for example, it would exclude the use of natural gas by the refining industry. In the case of electricity it includes transmission losses, adjustments, etc.

- des importations additionnelles, non montrées dans la publication sur les RPP, peuvent être incluses.
- le moment de la sélection des données influera parfois sur le calcul des données sur la disponibilité. Autrement dit, les résultats pourront varier selon que l'on aura ou non pris en compte les révisions pour le PPR.

À cause de la confidentialité et aussi à cause de la façon dont certains combustibles sont utilisés, on a employé un schéma spécifique pour la publication des chiffres dans ce bulletin. Ce schéma est indiqué dans le tableau explicatif suivant.

La sommation de ces tableaux donne la colonne 10 des tableaux A et B qui, évidemment, va exclure les données sur les "pertes des raffineries" déjà indiquées dans **Produits pétroliers raffinés**.

Tableau E - Produits pétroliers raffinés non énergétiques

Ce tableau fournit des renseignements détaillés au sujet des données figurant dans la colonne 11 des tableaux C et D.

Tableau F - Renseignements détaillés sur le charbon

Ce tableau fournit des renseignements détaillés au sujet des données figurant dans la colonne 1 des tableaux A et B.

Tableau G - Électricité produite à partir de combustibles fossiles

Ce tableau, qui utilise des renseignements complémentaires, sert de base aux données sur l'électricité thermique qui figurent dans la colonne 11 des tableaux A et B.

Autre fabrication. Dans certains cas, on utilise la classification "autre fabrication" lorsque la répartition des industries composantes du secteur manufacturier n'est pas disponible. Cette mesure vise à conserver la possibilité d'effectuer la sommation des tableaux.

Autoconsommation. Il s'agit ici de l'autoconsommation du pétrole produit par l'industrie - par exemple, les produits pétroliers raffinés consommés par l'industrie du raffinage du pétrole. Elle ne comprend pas la consommation de formes d'énergie produites par d'autres industries du secteur énergétique; ainsi, elle ne tient pas compte du gaz naturel consommé par l'industrie du raffinage du pétrole. Dans le cas de l'électricité, elle comprend les pertes de transport, les rectifications, etc.

TEXT TABLE I. How Industry Usage Data are Combined

TABLEAU EXPLICATIF I. Comment sont combinées les données sur l'utilisation des produits dans les différentes branches d'activité

Pub. = Published - Publier.

Numbers indicate with which line in the product column the industry is combined.

Les numéros dans les colonnes des produits renvoient aux lignes correspondant aux branches d'activité.

(1) Component of total industrial.

(1) Une composante de l'ensemble des branches d'activité (total industriel).

(2) Effective 1983; formerly combined in line 28, now split between lines 20 and 28.

(2) À partir de 1983; correspondait auparavant à la ligne 28, se divise maintenant entre la ligne 20 et la ligne 28.

(3) Effective 1983; formerly combined in line 20, now split between lines 20 and 28.

(3) À partir de 1983; correspondait auparavant à la ligne 20, se divise maintenant entre la ligne 20 et la ligne 28.

(4) Effective 1983; formerly combined in line 26, now split between lines 26 and 28.

(4) À partir de 1983; correspondait auparavant à la ligne 26, se divise maintenant entre la ligne 26 et la ligne 28.

(5) Was published in 1982, due to space limitations is not now published, although components are. Thus data point can be obtained by adding lines 19, 27, 28 and 29.

(5) Était publié en 1982, n'est pas publié maintenant faute d'espace, mais les composantes le sont. On peut obtenir une donnée simple en additionnant les lignes 19, 27, 28 et 29.

(6) Effective 1983; formerly combined in line 43, now split between lines 42 and 43.

(6) À partir de 1983; correspondait auparavant à la ligne 43, se divise maintenant entre la ligne 42 et la ligne 43.

(7) Effective 1983; formerly combined in line 45, now split between lines 42, 44 and 45.

(7) À partir de 1983; correspondait auparavant à la ligne 45, se divise maintenant entre la ligne 42, 44 et la ligne 45.

Data Sources

The data sources for this publication are mainly monthly surveys of the major energy suppliers. Certain salient points are worthy of note.

Gas Plant NGL's

Gas plant propane and butane supply is based on information derived from data collected by the National Energy Board (NEB). Starting with 1982, the data line **other adjustments** is being calculated in a similar manner to the item other adjustments shown for the RPP. Production and inventories of ethane from gas plants is obtained from data provided by the Alberta Energy Resources Conservation Board (AERCB). Starting with the fourth quarter of 1983, ethane usage has been estimated based on known supply and export data.

Natural Gas

In this publication natural gas "production" is, in effect, receipts of gas by the gas pipeline industry or marketable natural gas, i.e., natural gas available after processing/reprocessing stage. This concept is different from that used in Catalogue 57-207 where raw natural gas production was used. This change in concept affects the lines "production" and "producers consumption". Estimates for the non-energy use of natural gas have been derived from monthly statistics on the production of anhydrous ammonia, methanol and carbon black. The estimates take into account that only certain companies producing the products listed above use natural gas as a feed stock. Gas used as fuel associated with feedstock gas is shown under "Industrial Chemicals".

Conversion factors used for natural gas are subject to fluctuations due to the varying heat content of gas produced from different fields, and the processes to which the gas is subjected before being marketed. For the period 1978 to 1982 inclusive a standard conversion factor of 37.23 terajoules for gigalitre was used for natural gas data presented in this publication. Starting with the publication of the fourth quarter of 1983, to reflect the varying nature of gas heating content, a current national average (annual) heat content value will be used. This will cause some distortion of historical trends. However, users

Sources des données

Les sources des données de la présente publication sont essentiellement des enquêtes mensuelles auprès des principaux producteurs d'énergie. Certains points saillants méritent d'être soulignés.

L.G.N. des usines de gaz

Les statistiques de disponibilité concernant le propane et le butane produits dans les usines de gaz sont basées sur des chiffres recueillis par l'Office national de l'énergie (O.N.E.). À partir de 1982, la ligne **Autres ajustements** est calculée de la même façon que le poste Autres ajustements dans les tableaux sur les PPR. Les statistiques concernant la production et les inventaires d'éthane par les usines de gaz sont tirées des chiffres recueillis par Alberta Energy Resources Conservation Board (AERCB). À partir du quatrième trimestre de 1983, on a estimé l'utilisation de l'éthane en se basant sur les données connues concernant l'approvisionnement et l'exportation.

Gaz naturel

Dans cette publication, la "production" de gaz naturel représente en fait le gaz naturel destiné à l'industrie des gazoducs, ou le gaz naturel commercialisable, c'est-à-dire le gaz naturel disponible après traitement et retransformation. Ce concept diffère de celui utilisé dans la publication n° 57-207 au catalogue, qui utilisait la production de gaz naturel brut. Ce changement de concept influe sur les lignes "production" et "autoconsommation". On a estimé l'utilisation non énergétique du gaz naturel à partir de statistiques mensuelles sur la production d'ammoniaque anhydre, de méthanol et de carbone. Ces estimations tiennent compte du fait que seules certaines des entreprises fabriquant les produits énumérés ci-dessus utilisent le gaz naturel comme charge d'alimentation. Le gaz utilisé comme combustible avec un gaz d'alimentation figure sous la rubrique "produits chimiques industriels".

Les facteurs de conversion utilisés pour le gaz naturel sont sujets à des fluctuations en raison de la variation de l'enthalpie du gaz produit dans différents secteurs et des procédés auxquels il est soumis avant d'être commercialisé. Pour la période de 1978 à 1982 inclusive, on s'est servi du facteur de conversion courant de 37.23 terajoules par gigalitre pour les données sur le gaz naturel présentées dans cette publication. À partir du quatrième trimestre de 1983, on utilisera la valeur courante nationale moyenne (annuelle) de l'enthalpie de manière à tenir compte des variations. Cette façon de procéder faussera quelque peu les tendances historiques. Toutefois, les utilisateurs

can revise these data to reflect varying heat contents by employing the following conversion factors:

| | |
|-------------|----------------------|
| 1978 - 37.9 | terajoules/gigalitre |
| 1979 - 37.9 | " " |
| 1980 - 37.9 | " " |
| 1981 - 37.7 | " " |
| 1982 - 38.1 | " " |
| 1983 - 38.0 | " " |
| 1984 - 38.0 | " " |

The 1983 factor was based on the 1983 average heat content, for Canada, reported by natural gas distributors, as published in Catalogue 55-002, **Gas Utilities**. For subsequent years, the previous year's factor has been used for the calculation of the first three quarters of any year. When the conversion factor for the year in total is determined, it is implemented in the fourth quarter publication which also incorporates revisions to data for the entire year. Data for the current year are revised in the CANSIM data base for the whole year at the same time.

Non-energy sales of natural gas are shown only for provinces where the data is not confidential. Confidentiality constraints prevent other provincial figures being shown. As a result Canada totals are a sum of provincial figures published.

Coke Oven Gas

Figures for the production of coke oven gas are estimated from known coal coke production data. The thermal value of coal charged to coke ovens less the thermal value of the resultant coke production must equal the coke oven gas production, together with an allowance for heating and losses.

Steam

Steam **sold** is now included in the balance sheets. This item includes only known steam sales of large producers and therefore excludes any steam produced for own consumption. The primary production shown is that from nuclear sources with secondary production being shown under "transformed from other fuels" (Line 13). This method of treating the transformation of a primary form into a secondary form differs from that used for all other secondary forms in that the production of other secondary energy forms appears as "production" (i.e., Line 1) under the relevant columns. Additional sources of primary steam, i.e., biomass and geothermal, will be included if they become significant.

peuvent remédier à la situation en employant les facteurs de conversion suivants:

| | |
|-------------|----------------------|
| 1978 - 37.9 | terajoules/gigalitre |
| 1979 - 37.9 | " " |
| 1980 - 37.9 | " " |
| 1981 - 37.7 | " " |
| 1982 - 38.1 | " " |
| 1983 - 38.0 | " " |
| 1984 - 38.0 | " " |

Le facteur de 1983 est basé pour le Canada, sur l'enthalpie moyenne de 1983, déclarée par les distributeurs de gaz naturel, d'après la publication **Services de gaz** (n° 55-002 au catalogue). Dans les années subséquentes, on utilise le facteur de l'année précédente pour calculer les données se rapportant aux trois premiers trimestres d'une année donnée. Une fois le facteur de conversion établi pour toute l'année, on l'applique dans la publication du quatrième trimestre, pour les données du quatrième trimestre et pour les données révisées pour l'ensemble de l'année. On révisé en même temps les données du CANSIM pour toute l'année en cours.

Les ventes non énergétiques de gaz naturel ne sont rapportées que pour les provinces où de telles données ne sont pas confidentielles. Les règles de confidentialité ne permettent aucune divulgation des chiffres pour les autres provinces. Cela dit, le total pour le Canada est donc la somme des chiffres provinciaux publiés.

Gaz de fours à coke

Les chiffres sur la production de gaz de fours à coke sont estimés à partir des données connues sur la production de coke de houille. La valeur thermique de la houille chargée dans les fours à coke moins la valeur thermique du coke ainsi produit doit égaler la production de gaz de fours à coke, rectifiée pour tenir compte de la chaleur et des pertes.

Vapeur

Les **ventes** de vapeur sont maintenant comprises dans les bilans. Ce poste comprend uniquement les ventes connues des grands producteurs et exclut par conséquent la vapeur produite pour consommation propre. La production primaire indiquée est celle tirée de sources nucléaires; la production secondaire figure comme un poste négatif sous la rubrique "Transformé en autres combustibles" (ligne 13). Cette façon de traiter la transformation d'une énergie primaire en une forme d'énergie secondaire diffère de celle utilisée pour toutes les autres formes secondaires du fait que la production d'autres formes d'énergie secondaire apparaît comme "production" (c.-à-d., la ligne 1) sous les colonnes appropriées. Les autres sources de vapeur primaire, biomassique et géothermique par exemple, seront incluses quand elles deviendront suffisamment importantes.

Secondary steam generation, as shown in this publication, can be the product of dedicated steam plants (in which case the fuels used are indicated) or the result of co-generation (in which case no fuels are shown) of steam and electricity. For the dedicated plants a measure of the efficiency of the transformation of fossil fuel into steam can be made, whereas for co-generation plants no such measure is possible since all fuels used are considered to have been used in the generation of electricity.

In the natural units part of Tables A and B, where no inter-energy summation is possible, the secondary production of steam is shown as a negative number on Line 13. This technique allows for no impact on the "total" columns yet it allows the "steam" column to retain its arithmetic sense. In the terajoule part of Tables A and B, however the treatment of secondary steam is different. Production of secondary steam is **not** shown in Line 13 in order to enable the proper summation of steam generation for "total primary sources" and "total primary and secondary" columns. Line 14 "net supply" shows in the steam column, a value which includes both primary and secondary steam production. This enables the summation of the various **individual** components of "total primary and secondary" on Line 14. Net supply of "total primary sources" excludes any secondary steam and gives the true value from primary sources. This approach ensures that the columns "total primary sources" and "total primary and secondary" retain their arithmetic sense.

Fuels Used in Thermal Electric Generation

Utilities

For the year 1976, coal used in thermal generation stations was reported in the "Coal Users Survey", while generation from such stations was known from annual surveys. Reasonably accurate estimates of generation from coal by quarter were derived. Similarly, gas used by electric utilities was available from the gas utilities monthly survey (unpublished data), while electric generation from gas was known on an annual basis. Again, using these two factors, reasonable quarterly estimates of electricity generation from gas were obtained. All other thermal generation was attributed to oil products.

La production secondaire de vapeur, telle qu'indiquée dans ce bulletin, peut être le produit d'usines dédiées à la production de vapeur (en tel cas, les combustibles utilisés sont indiqués), ou le résultat de coproduction d'électricité et de vapeur (en tel cas, aucun combustible est montré). Pour les usines dédiées à la vapeur, une mesure du rendement dans la transformation des combustibles en forme de vapeur peut être calculée, alors que pour les usines de coproduction, aucune mesure semblable ne peut être calculée puisqu'on considère que tout le combustible est utilisé pour la production d'électricité.

Dans la partie des tableaux A et B exprimée en unités naturelles, où il est impossible de procéder à des sommations des différentes formes d'énergie, la production secondaire de vapeur figure comme une inscription négative à la ligne 13. Les colonnes "total" ne sont pas touchées, tandis que la colonne "vapeur" conserve sa signification arithmétique. Dans la partie des tableaux A et B exprimée en terajoules, le traitement de la vapeur secondaire est toutefois différent. La production de la vapeur secondaire ne figure **pas** à la ligne 13 afin de permettre une sommation appropriée de la production de vapeur dans les colonnes "total des sources primaires" et "total primaire et secondaire". La ligne 14, c'est-à-dire la disponibilité nette indique dans la colonne "vapeur", un nombre qui englobe la production de la vapeur primaire et secondaire. Ceci permet la sommation des **diverses** composantes de la colonne "total primaire et secondaire" à la ligne 14. La disponibilité nette du "total des sources primaires" exclut toute vapeur secondaire et donne la valeur réelle des sources primaires. En procédant ainsi, les colonnes du "total des sources primaires" et du "total primaire et secondaire" conservent leur signification arithmétique.

Combustibles utilisés dans la production d'électricité thermique

Services publics

Pour 1976, les centrales thermiques ont déclaré leur consommation de charbon dans le cadre de l'enquête sur le charbon et leur production, en réponse à des enquêtes annuelles. À partir de ces données, on a pu dériver des estimations satisfaisantes de la production d'électricité par trimestre. De même, les déclarations mensuelles des services de gaz (données inédites) ont indiqué la consommation de gaz des services de distribution d'électricité alors que les données annuelles ont permis de connaître la production d'électricité des centrales à gaz. Ici encore, à partir de ces deux facteurs, on a pu obtenir des estimations trimestrielles satisfaisantes de la production d'électricité par le gaz. Le reste de la production a été attribué aux produits pétroliers.

In 1977 and subsequent years, the usage of oil, gas and coal for thermal generation obtained from the utilities is used for estimates of generation by quarter and by fuel type. Estimates for non-reporting companies are also now included.

Industrial Generation

In 1977, estimates of fuel used were based on annual survey results, with fuels allocated quarterly in accordance to the quarterly pattern of net generation by company. Within these estimates, conventional steam generation by industry is assumed to have an efficiency of 65%, or a heat rate of 5.537 megajoules/kilowatt hours. When figures supplied by industry approximated these values, no adjustments were made.

This approach differs from that used prior to 1976 in Catalogue 57-207, where the industrial use of energy for conventional generation was assumed to include the energy required to produce the initial steam and was not restricted to the energy required to super heat such steam for use in the turbine/generator. Such industrial co-generation is normal where steam is produced primarily for process heating applications and some electrical generation is performed as a by-product operation. (Utilities, however, are viewed as being in the business of producing electricity and all heat losses are ascribed to electrical generation yielding maximum possible efficiencies of about 35% to 40%.) For gas turbine and internal combustion generation, reported industry figures were left unadjusted.

For years subsequent to 1977, estimates of fuels used are based on company monthly net generation data. Efficiencies and fuel types are those obtained from the previous year's annual report from the company with efficiencies adjusted as necessary.

Crude Oil

For reasons of confidentiality, imports of crude oil have been excluded from the tables relating to the individual Atlantic provinces. Similarly, all subsequent data points for "crude oil", for "total primary sources" and for "total primary and secondary sources" do not reflect such imports. However, Table 2, the Atlantic provinces in total, does show imports of crude oil into the region as a whole, and as a consequence, the data contained therein are not the sum of the individual Atlantic provinces.

À partir de 1977, les données sur l'utilisation du pétrole, du gaz et du charbon obtenues auprès des services publics servent à estimer la production par trimestre et par type de combustible. Les estimations pour les compagnies non déclarantes sont maintenant comprises au même titre.

Production industrielle

Pour 1977, les estimations sur l'utilisation du combustible sont fondées sur les résultats d'enquêtes annuelles, l'utilisation étant répartie chaque trimestre en fonction de la tendance trimestrielle de la production nette de chaque entreprise. À même ces estimations, le rendement de la production industrielle de vapeur est fixé à 65% ou à un taux calorifique de 5.537 megajoule/kilowatt-heures. Lorsque les chiffres fournis par l'industrie se rapprochent de ces estimations, on ne fait aucun ajustement.

Cette méthode diffère de celle qui avait été utilisée avant 1976 dans la publication n° 57-207 au catalogue, qui supposait que l'utilisation industrielle de l'énergie pour la production courante comprenait l'énergie nécessaire pour produire la vapeur initiale en plus de celle requise pour surchauffer cette vapeur aux fins des turbines/génératrices. Ce type de coproduction industrielle est normal lorsque la vapeur sert à produire essentiellement de la chaleur industrielle, l'électricité n'étant qu'un sous-produit. (Toutefois, les services publics étant considérés avant tout comme des producteurs d'électricité, toutes les pertes de chaleur sont attribuées à la production électrique pour un rendement maximum possible d'environ 35% à 40%.) Pour la production des turbines à gaz et à combustion interne, aucun ajustement n'a été apporté aux chiffres de l'industrie.

Depuis 1977, les estimations sur l'utilisation du combustible sont fondées sur la production mensuelle nette, par entreprise. Les rendements et les types du combustible sont ceux établis par l'entreprise dans les questionnaires couvrant l'année précédente, avec certains ajustements pour les rendements, là où ils s'avéraient nécessaires.

Pétrole brut

Pour des raisons de confidentialité, les importations de pétrole brut ne figurent pas dans les différents tableaux sur chacune des provinces de l'Atlantique. De même, toutes les données simples subséquentes pour le "pétrole brut", le "total des sources primaires" et le "total, primaire et secondaire" ne tiennent pas compte de ces importations. Toutefois, les données du tableau 2 sur l'ensemble des provinces de l'Atlantique incorporent les importations de pétrole brut dans l'ensemble de la région et ne sont donc pas simplement la somme des données présentées pour les différentes provinces de l'Atlantique.

Inventory data used in the stock change shown on Line 5 are based on two sources, pipeline inventories (which are source of origin data and do not indicate the province where held) and refinery inventories. The net effect of this method of calculation stocks change is to over state some provincial data and understate other provincial data. At the Canada level however these differences counter balance. Further, the line "statistical difference" is similarly influenced by this method of calculation.

Alternative Energy Forms

In the main tables of this publication alternative energy sources are not included, although it has been estimated that these sources account for more than 7% of Canada's energy requirements.(1) However in the tables, electricity produced by biomass (wood and spent pulping liquor) has been included. Also included, as a footnote following Table G in the second and fourth quarters issues, is the wood waste and spent pulping liquor used by the pulp and paper industry in the generation of process steam, steam for generating electricity as well as for other heating purposes.

Advance Information

It is possible to obtain some of the information contained in this publication some three to four weeks before it is available in printed form. There are two possibilities:

1. Statistics in natural units only (with no terajoule equivalents) are available on computer tape. Data relate to the quarter under review and individual preceding quarters for the year (i.e. no cumulative data). The price is \$50 and a computer tape must be provided. Please contact the Energy Section (M.A.P.I.D.), Statistics Canada, Ottawa, K1A 0T6 (telephone: 613-990-9823).

Pour calculer les variations des stocks telles qu'indiquées à la ligne 5, deux sources distinctes de statistiques d'inventaires sont utilisées: les stocks des pipe-lines (basés sur la provenance des quantités expédiées sans égard à la province d'entreposage), et les stocks des raffineries. L'effet net de cette méthode de comptabilisation est de sous-estimer le niveau de variations de stocks de certaines provinces, et de sur-estimer cette même mesure dans les autres provinces. Toutefois, en agrégeant au plan canadien, ces différences se contrebalancent entre elles. En conséquence, la ligne "Différence statistiques" est aussi influencée par la dite-méthode.

Sources d'énergie alternatives

Les sources d'énergie alternatives ne sont pas incluses dans les tableaux de ce bulletin, bien qu'on estime que ces sources répondent à plus de 7% des besoins énergétiques du pays(1). Cependant, l'électricité produite par la biomasse (bois et lessive de pâte épuisée) est incluse dans les tableaux. Vous trouverez aussi, comme renseignements supplémentaires au tableau G dans les publications des deuxièmes et quatrièmes trimestres, les déchets de bois et la lessive de pâte épuisée utilisés par l'industrie de pâtes et papier afin de produire de la vapeur utilisée pour la transformation, pour la production d'électricité et pour d'autres usages à l'intérieur des usines.

Information anticipée

Il est possible d'obtenir certaines informations contenues dans cette publication, cela quelque trois ou quatre semaines avant la copie imprimée. Il existe deux possibilités:

1. Les statistiques en unités naturelles seulement (sans les équivalents en térajoules) sont disponibles sur bande magnétique; les données se rapportent au trimestre en cours ainsi qu'aux trimestres précédents de l'année (c.-à-d. non cumulatif). Le coût est de \$50 et une bande magnétique doit être fournie. Prière de s'adresser à la Section de l'énergie (D.I.M.E.P.), Statistique Canada, Ottawa, K1A 0T6 (téléphone 613-990-9823).

(1) Canada Energy Supply and Demand 1983-2005, Summary Report, page 19, National Energy Board.

(1) L'Énergie au Canada, offre et demande 1983-2005, rapport sommaire, page 19, l'office national de l'énergie.

2. The Canadian Socio-Economic Information Management System (CANSIM), which is Statistics Canada's computerized data bank, contains data in terajoules from the A and C tables of this publication by quarter from 1978 to date. Refer to CANSIM matrices 7976 to 8001.

Note: Data published on an annual basis in publication **Detailed Energy Supply and Demand in Canada**, Catalogue 57-207, are available from 1958 to 1977 in CANSIM matrices 7140 to 7436.

2. Le système canadien d'information socioéconomique (CANSIM), qui est la banque de données informatisées de Statistique Canada, renferme des données en térajoules tirées des tableaux A et C de la présente publication, présentées par trimestre de 1978 jusqu'à aujourd'hui. Se reporter aux matrices 7976 à 8001 du CANSIM.

Nota: Les données publiées sur une base annuelle dans la publication **Disponibilité et écoulement d'énergie au Canada**, n° 57-207 au catalogue, sont disponibles pour les années 1958 à 1977 dans les matrices 7140 à 7436 du CANSIM.

TABLE S. HISTORICAL ENERGY SUMMARY TABLE - CANADA

TABEAU S. TABLEAU CHRONOLOGIQUE SOMMAIRE DE L'ÉNERGIE - CANADA
